The urban green spaces extend beyond leisure; greenery often presents radiant colors in the city. The vibrant floral plants in parks create a sense of relaxation and recreation. Further green spaces foster community bonds as families gather for picnics, sports, and cultural events. Likewise, greenery in urban cities improves the air quality, mitigates climate change, and promotes the overall well-being of the community. However, increased developments in urbanization trigger the need to preserve the green spaces. Such as sustainable urban planning to create and maintain parks, tree-lined avenues, and green rooftops is essential for balance between urban development and environmental preservation. Thus to ensure a safe, healthy environment for human beings.

Title: Greenery is an asset to preserve the environment.
