4: IMF Bailouts are Recipe for Disasters 4.1: Creating irrevocable dot. trap and making dependent economics. case-study. Argenting 4.2: Washington Consensus and neo-imperialism resulting in economic disparities; rich getting richer and poor getting poore. and conditions of already declining economy. case-study, Pakistan.

· Day:_ International Monetary Fund is believed to upgrade the economic conditions of state since 1945 St. finance agency of united nations claiming cawing-out towards economic stability by supporting crashed economies guiding institutional and fiscal reforms and providing to improve financial conditions of a countary. This finance agency has now transformed consensus, neoimperialism and imposition of strict terms and conditions, resulting in Visiters Diving into the debt bailout

Monetary Fund provides loans to help seeking countaines on the basis of terms and condition. When the countary agrees on all conditions IMF passes the loan package as a financial assistance to the countary this instalment is called boil-out package enample Pakistan has gone to IMF in 2024 for the 24th time to get bailout package Irrelevant details Coming towards the so-called objectives near to economic default It paves out the road for defaulter countary which leads the state towards economic stability. Its main

Objective is to become the financial back-bone of the country for Shorter or longer period time to support the economic skeleton of the State . Sri-lanka is the robust example of this statement, in Sri-Lankan elonomy werge of default when she approached IMF and got bailout package of \$3 Billion and reversed the economic Secondly, IMF objects to introduce the fiscal and institutional reforms and guides the countries in their financia issues to gain economic prosperity. For example when Pakistan goes to IMF for bailout parkage it implies rules and terms and conditions and give some suggestion

	Another claimed goal
	of IMF is to provide short
	term and long term Loans
	term and for the total
	to its member states who

to seek help for francial assistance. This loan can be for infrastructural reforms, capacity building of institutions or to enhance the living conditions of the citizens. International Monetary Fund provides short term and long term loans to help seekers Long-terms loans are planned queording to Structure Adjustment Program (SAP) while short-term loans are provided on the beis's of Stack-By- Arrangements (SBA). There is different terms and conditions associated with SBA and SAP model. Here we include the case-study of Mexico. Mexico's economy got declined in 1980's and it seeked help from IMF in the form of bailout package . It boosted her economy by financial help and reforms introduced in

the economic system so well that now Mexico is the 12th largest economy of the world These all case-studies and facts illustrate that IMF is a road towards stability But, here gre many counter arguments which prove that IMF bail-ouft packages are recept of disasters rather than economic prosperity. The most important counter argumen is the debt trap exerted by the IMF from which no one can revoc and the ultima distination of that trop is Failure of economy Debtbased economy is made dependent on financial agency to return its previous loan and for that a state has to I take another bail-out package hence, a continous

3% cycle of loan and debt servicing is established and weak vulnerable economies are unable to get nid of it. Argentina is a case study here Argenting is the second most financial help seeker of IMF. It availed loan services in its economy of failure. In the start of twentieth century a Argentina wes a prosperous and wealthiest countary of the works Then there was a 00 list of military intervention which made it a defaulter. It défaulted nine times in nc history and went to IMF for help in its exucial times. How a future supa power of the world got victim l'economie disaster due to IMF Now, Argenting is the biggest debtor of IMF with loan of \$ 32 billians.

Initially IMF was made to help financial weak economies and to improve. the living standards of Human beings but then came the concept of Washington Consessus This concept prevails developing countairies that all the loans are approved from Washington and U.S is playing evil . IMF consists of countaines which finance this agency the share of States in IMF financing is the largest so it has right to approve the loans and teems and conditions associated with it Bu third world developing countries say that IMF is mere and they play with debtors through the usage of neo-imperialism philosophy

suggest policies to IMF which it conveys to debtor and trap them in ix-revocable debt typ to incentivise the creditions. The top five debtors of IMF in 2024 are Argentina, Pakistan Egypt, Uprain and Ecudor with \$32bn, \$7bn, \$11bn, \$9bn and \$6 bn loan respectively Imposition of strict terms and conditions on already crushed economies further escalate them towards désasters. A défaulting and bankrupt economy is further pushed hard to pay-reback on strict scheduale which brings more ham than any good These terms and conditions
may prove disastrous for
the fragile economy. Here is
the case-study of Pakistan.

Pakistan is the biggest debtor of IMF - which got Twenty four bail-out packages - the last one got in second-half of Fiscal year was about \$ Non But the terms and conditions imposed by IMF which are recipe towards economic disasters are discussed here IMF imposed the condition of imports liberalisation Pakistan can not hinder imports and cannot put taxes and tarrifs on imports then how can the revenue could be generated Trump the President-elect imposed Sixty percent tarrif on China to get revenue The second important condition of IMF which pushed pakist an towards economic instability is removal of subsides. Pakistan provides subsidies on some commodities to relief the citizens

in the time of inflation 26%. says world Bank. If the subsidies are removed the commodities Will hike in price resulting in Expensive exports with will be unable to compete in globa market. Decrease in export will further worsen the economy Increase in Indirect taxes would burdenize the citizens leading to further inflation. Imp imposed the condition to increase GIST by 1 percent. Another disastrous condition imposed by IMF is to reduce energy subsidias. The increase energy resources oil, gas and electricity will result in ultimate price hike further inflation increase and economy

Critically analysed view is that IMF is a finance agency primarily but now a day it has created recepies economic disasters to make states financially dependent on leveraging the creditors by making them richer and debtors poorer maixist approach. The case-study pakistan and conditions imposed on pakistan implies disaster road than a prosperity way, Neo-imperialism and washington Consensus furt empowers this idea. Avoid using first nouns On a nutshel we say that the main of IMF are to stabilize the crashed economies and support the financial system and giving fiscal suggestions
