Essay

Economic wasfare is become ing a new normal in sufernational relations" (Ian

Bremmer).

Increased connectivity and juter dependence in the contemporary world has caused paradigm shift in the warfrout. In the recent years, the concept of warfare has sompletely changed. Long goue are the days, when nations used military might and full scale invasions to assert influence over the other rations. New warfaronts lie in economic zones. It is por maritime resources and kade routes, increasing confention among regional economic organization for economic dominance, conflict among the state in recourse kich regions of the world, competition among the global kivals for economic infraskudbar projects and politicipation of FATF by West to wall off the rival economies. Similarly, sugaring trade was beforeen china and economic Sanctions ou rival countries to suppress economic growth and restrict their access to critical economic tresources are also the open ment festations of the fact that new was

browts lie in the economic hotspots. This paraoligm shift in the tacits of warfare has far
reaching global sumplications in the form of
economic inequality and instability, poverty
particularly in cleveloping states, humanitarian
crisis dissuption of economic global energy
chains and rise of black market and illight
trade. However other risks can be mitigated
by reconfiguring a world order in line
with democratic releast having equitable
say for all formerly sidelined continents, depoliticization of PATF to ensure collaboration, shift of
global powers from mational interests to collective
human development institutives and doing away
with protectionist policies.

designated for economic activity. Economic gones com sange from range from range from range from range from range from and pieces and risource sich oceans, important trade soutes and check points. Not only this, economic warfare includes all those factics which can be employed by a states to undermine and cripple the economy of the sizal state. Competing for economic infraskucture projects to putting sanctions on the sizal states all such measures come under the heading of economic warfare. The concept of economic

Weefare has gained momentum. I thorower due to firstly, due to the risk of nuclear warfare which has mitigated the possibility of armed conflicts to a larger extent. Secondly, human and economic cost of armed confied has also fractured the logical basis of physical warfare. So, economic warfare provides a more heasonable, strategic and effectio approach to tackle down external threats. The menifestations of the fact that world has shifted from a kadetional waifare to economic waifare are numerous. First menifestation is the ongoing kade was between China and the US. This was has been this is interersing confidence application thideatwo global powers, propelled by couplicting ecomic ideologies. The US has accused China of curfair trade practices and lecthology theft, since 2018. And, China has blamed the U.S. for protectionism and violation of trade rules of World Trade Organization. Both Country put a series of lariffs and other trade barriers against each other which resulted in significant economic losses for both of the countries. This trade war is a tacke of economic warfare. It 16 employed by both states in order to lead the global order

for economic custarkucture projects also point towards. The fact that new warpsonts lie in economic zones. CPEC is the blagship project of Belt and Road Institutive by China. Main purpose of this project is to enhance regional connectivity and economic integration. This project once realized, will give access to China to Indian Ocean Region and Connect it to Contral Asia, South Asia and Europe. To counter his project of China and prevent it from becoming a global hegemon on economic scale, its global rival U.S. has taken several steps such Build Back Buller World (B3W) and India Middle East Economic Corrider CIMEC). This global power competition for economic infrasfructure : projects points to the shift of new Stiategy towards economic zones. In contemporary eran blue eco. plz work ap writing well-directional sphrases a Significant position. Ma-Estime resources are a big source of economic gains. Moreover, oceans have many important chorepoints which seize as the trade router and assume critical importance as 80% of the world trade take place through there trade Louter. Competition of the global powers for control of maratime recourses and access

to maritime trade router is also the meni.

bestation of the fact that new war fronts lie in economic zones. It is examplified by US' pivol to Asia policy, Indians increasing hegemonic designs in Indian Ocean Region and China's growing influence and claims on South China Sea This growing rivalry among global powers for maritime resources clearly deficts a shift in war front.

The natural resources in the e conomic zones, also serve as catalyst for violence and instability. These resource rich economic zones are transforming into warfronts. H is clearly menifested by chaos and upheaval en-thère areas. It can be examplied by the couplied on Syera. The Conflict in Syera is Jueled in part by completition over gas an oil resources. Similarly, Ivagi invasion of the US. was also for oil-grab in the same fashion, conflict between Iran and Sandi Prabia has same causes. One of the causes of this conflict is the desire of both countries to gain control over oil fields. So, it becomes clear that economic gones are becoming The new war fronts. Moreover contention among the regional economic organizations for econo-

mic domination is also growing. The Eastern economico organizations such as BRICC. ECO, and SCO are competing with Western organizations such as EU for economic dominance. In - this regard. Organizations such as BRICS are growing economically ad an exponential rate and even pondering to use Some affernative currency Other Than US dollar los trade purpose. This competition and rivalry among regional economic organigations not only mentifests a shift in the glulobal order but also depict that new tacks of warfare and achieving global hagemony are economic in furthers economic Sanctions are also being utilize as a means and tools of warfare. These economic Sanctions are posed by the countries on their rival states to suppress their economic growth and restrict their access to critical economic resources. For example the sanctions ped by W.S. on Iran and North Korea to half their nuclear progsam apparently. An other Phustration is the U.S. sauctions on from - Parkestan by U.S. ou han is to weaken its riviclear program. Bad, Iran is also

a rival of the U.S. Such sanctions are also put ou Iran to destroy 9t and make It economically crippled. As the difference can be clearly seen that Indir, despite being not a member of Non Supplier & Group (NSG) enjoys - The same benefit. as that of one of 94s members, just because it has good relations with the U.S. In this way economic sanctions are also used as o was tacks and put ou rival states to destroy them economically. This demonstrates that new warfsonts lies in economic hotspots. In addition, Financial Action Task force (FATF) was founded to counter money Laundering, terrosist financing and other related -threats to global financial system. Countries which are placed on gray or black list of FATT face severe economic reparassions ranging from decrease in foreign direct Investment, increase in cost of doing business to replation from global financial system. FATF has been used multiple times by Western States amind geopolitical tensions with rival countries to strain on FATT goe blackist since long, focus significant economic sanctions and isolation

que to geopolitical tensions between Iran and western countries. In this manner. politicization of FATF by West to wall off the rival economies is also a menifestation of the Use of economic . factic to country the rival countries. So, it is pertinent to say that new was fronts lie in economic hotspots. Using economic tools and factics as newer techniques of warfare have far reaching global implicat. rous which have more negative effects ou developing countries. Some of these are discussed in the following paragraphs. First of all it leads to economie instability workdwide. It causes fluctique ations in the global markety. For example pulling sampetions on a major Oil and gas producing economy can cause global disrupt. in gas and Off Psice. As - The sanctions put by U.S. ou Russia in the context of Pussia Okraine was have led to global energy price hikes as fussia, is the chief imposter of oil and gas. These disruptions on the price

enstability -throught the world. for uplation globally which particularly: avoid such prescupting godding ploobeve toping and weler developed states. Inplation yields poverty, and affects the standard of living in by the fact that disruptions in global energy chains lead to shortages and Processed prices of essential goods. Therefore, 91 is clear that how the Ripple effects of economic warfare leads to a global downturn. Mereover disruption in globa energy chains also lead to unintended environmental degradation. For instance, 91 might lead the countries to rely on coal or other environmently harmful resources for productions of energy. This has also lead to global temperature rise of 1-10 from that the level of 1996. From this 91 huskation 91 95 evident that 91 hair the environment in and indirect manner. It shifts the attention and resources away from the environmental

initiatives and sustainable development goals. In this way, economic warfare becomes au indirect, yet significant source of environmental degradation. In the modern world, the progress and development in all sectors 15 dependent ou e cononic development. Even the motifary prowess is directly dependent ou economic 8 tourding. For global deve topment and progress, there is a dire need of mutual corperation and collaboration, partialarly in the field of economics. In this regard, following steps can be taken. First of all, there is a dire need to seconfigure the world order in line with democratic Ideals which should be an equitable say for all the sidelined confinents and areas such as Global South and Africa. Secondly, FATF and all the global pinancial institutions should be depoliticized. Global powers need to Shift their focus for national interest to collective human development initiatives and should do away with profectionist policies like America

Lirst' Policy - Lastly, - the spirit of Competition must be overshadowed by the spirit of co-operation and mutual collaboration to make a mass-preently world. 10 sum up. the older tactics of asserting dominance by one state me litary might and conventional full scale invasion are completely replaced by economic tools. Now the states are engaged in economic was pare that is evident by the ongoing pade was between the U.S. and China, global power competition for economic Profreskucture project and growing rivalry among the global rivals for control of manitime resources and maritime trade router. Morevuer, conflict among the states in resource rich areas of world and using economic sanctio as a torst to make und countries economically perished all indicate towards the fact that new war fronts lie in economic zoner. This new ferm of warfare has par reaching global implications in the form of global

disruptions of energy chains, increaring inplation and poverty partic-Marly in dive loping countries an environmental degradation. Since, it is economy which makes a country a developed country, so there is a dire need of enhanced mutual collaboration & cooperation and willings. ess on part of all the states. The spirit of corperation must way to the spirtt of competition to yield amass- briendly world-Is 91 preperred to leave a line after every paragraph for a better look?
