- 5.1 Exploiting Blue economy
- 5.2 Investing in Strategic Developmental Projects
- 5.3 Focus on vocational training Institutions
- 5.4 Ensuring political stability
- 5.5 Fighting Climate changes

6. Conclusion.

Japan, a country, having fourth largest world economy of the 21st century is the same country that was converted into ashes right in 1945. Its economic growth was not only built their country again but also made a mark on the global. From the latest technological advancement to industrial powerhouse, it has worked with dedication and strength. Its industrial sector is the backbone of economy, importing machinery around the globe. Opposite has been the case with Pakistan since its inception in 1947. Pakistan a country with wide range of natural resources, filled with extraordinary worth-visiting places, a country with 67% of youth, a country full of man-power with its geostrategic location, having direct access to the warm waters is still unable to cope up with its economic crisis. Having abundant blessing, it still is insufficient to bring out Pakistan from financial crisis and leader ceasing Pakistan burn more bailout programmes by IMF. The hostile neighbours have created major security issues in Pakistan which are exacerbated by internal political instability and lack of accountability on vertical and horizontal level. Even the

CPEC, which was considered a heavenly opportunity for Pakistan is still unable to bring prosperity and employment in Pakistan due to person negligences and maladministration. Economy of a country is a diverse subject which is connected to almost all spheres of function of a country. There will always be a default if the fault lines lie either in institutions, leadership, stock markets, import-export balance, balance of payment crisis, low skilled labours or any other shakling sphere of work. All the countries whether be it the world leader or the small under-developed countries, have some external and internal loopholes which can create the devastating effect on country's progress. Pakistan is still unable to achieve its sustainable economic growth due to some external and internal causes like low Foreign Direct Investments, High imports, low industrialisation, etc. But Pakistan still holds the potential to bring the economy on the path of sustainable development growth. Pakistan needs to focus on the areas of low priority and must also unlock new areas of high potential to bring life back to its bridled economy.

If we look into the current economic statistics Pakistan's GDP growth rate stands at 2.3% a much lower than the average growth rate of countries like India, which got independence with the inception of Pakistan, has 7.2% average growth rate of GDP. In order to maintain its economy, Pakistan needs to bring its average GDP growth rate to 7%. There are always some potential which needs to be utilized in a better way to bring development. Pakistan also has CPEC, access to a vast coast line, natural resources and much more which needs to be administered with efficiency and transparency for proper and required allocation.

"Continuing Economic growth requires both recruitment of new companies and expansion of existing businesses."
(Phil Bradesen)

For every country Foreign Direct Investment is as crucial as body to soul. It is an opportunity for increased trade, increase in cooperation opportunities and enhancing the positive image of the country. Pakistan has been facing a decline in Foreign direct Investment

Since the inception of war on terror which has increased terrorist attacks and security concern about 133% since 2001. Companies feel reluctant to invest in Pakistan as Chinese workforce were targeted in Pakistan. It is a crucial issue which needs to be resolved.

Secondly, Pakistan has become an import-based economy. Pakistan's Food Import bill of 2022 stands at 1.01bn. Although the profession of 37% of public is from agriculture sector. Still Pakistan is unable to produce food to fulfill country's needs. In Pakistan, 9 million dollars annually spent on import of potatoes for McDonalds.
