

Importance of Education in the age of Technology

In 21st century, Technology is ~~also~~ evolving day by day. Education plays an immense role in the era of technology. It enhances the skills and digital literacy of individuals to thrive with advanced technology. For instance, South Korea, a war-torn nation, transformed into the tech leader by the help of education. Furthermore, Education fosters individuals to innovate new ideas and improve technology. For example, Human create platforms like ChatGPT, Deepseek and Gemini which enhance their critical analysis ability and assist in problem solving. Additionally, In the future, AI. will replace traditional jobs. By 2025, 50% of workers will need reskilling due to AI Adaptation. For better future, education fosters individuals to learn digital skills and adapt the digital professional demand. In essence, education plays a creative role in enhancing technological skills. In addition, It shapes individual to succeed in fast-changing world.

Energy crisis in Pakistan

Energy crisis is the persistent challenge for Pakistan. There are several causes and consequences of energy crisis. The usage of limited non-renewable sources and unequal distribution of energy are among the main causes. In addition, rapid urbanization is one of the factors contributing towards energy crisis. Pakistan is an energy-starved nation. As per PIDE, Pakistan obtains 49 percent of energy in a form of fossil fuels. These fossil fuels are insufficient for country's need. Furthermore, unequal distribution of energy creates a gap between urban and rural areas, creates injustice and results in energy losses. According to UN reports, Pakistan's urban population is expected to exceed 50% by 2025. However, limited energy sources are insufficient for a large population. On the other hand, energy crisis causes a vast impact on industries. The closure of industries leads to unemployment. Moreover, energy crisis is hindering foreign direct investment in Pakistan. Nevertheless, ~~addressing~~ government should implement precise policies to address energy shortages. It should initiate the usage of renewable sources of energy.

instead of non-renewable source of energy. Additionally, equal distribution for both urban and rural areas should be ensured. In last, sufficient energy is crucial for country's growth and development.

Gender Equality is a Myth

Gender refers to as social constructed norms. Despite the globe efforts to ensure equality, gender equality remains a myth. Significantly, in the patriarchal society, women still faces sexism. They are unable to access education and are marginalized in employment opportunities. In addition, women faces discrimination in decision-making roles. For instance, in the South Asian region, women are exploited. On 8, July, 2025, the International Court of Justice sought arrest warrants of Taliban Supreme leader Haibatullah AKhunzad and Chief Justice Abdul Hakim Haqqani over the oppression of women in Afghanistan. Similarly, women in sub-continent faces discrimination.

According to World Economic Forum (WEF) Gender Gap Report, Pakistan

ranked at least position (148th/148). The report evaluates four key points: economic, education, health, and women empowerment. Conversely, in developed countries, women are often paid 13% less than men. Hence, it is evident that gender equality is crucial for social justice, economic development and a better future.
