The Essay

"People can live without love but not without water." Water is the lifeline of any country. Neither a nation nor human beings can survive without water. Unfortunately, Pakistan is a victim of the water crisis. Pakistan is making astronomical efforts to overcome the water crisis. The country's water resources are under immense pressure due to a combination of factors, including climate change, population growth, water wastage and mismanagement. A large area is unable to be cultivated due to insufficient water. In addition, mass migration can be observed. People leave their villages and homes on account of water deficit in Pakistan. If the government succeeds in overcoming the issues, every field of life will get prosperity."
