

Role of Education in human development.

Education plays a critical role in human development. Education fosters critical analysis and decision-making abilities of individual. It empowers individuals with both social and economic progress. Education enhances the critical analysis skills of human. In this context, studies show that farmers and labourers with better education rapidly adjust with technological and social changes. Furthermore, education assists individuals towards decision making abilities. For instance, countries with high literacy rate, people elect leaders on their judgement and maintain democracy. In the same way, education nurtures individuals to achieve social progress. An educated individual respects civic responsibilities and moral norms. Significantly, education fosters economic advancement of individual and society. According to WHO, 60 and 90% of Japan's economic growth is achieved by highest human development index. In essence, education is not a tool of economic

development but it helps to transforming
thinking capabilities and society.

development thinking capabilities and society

Class room decides the future of Nation.

Classroom is the basic unit of nation's development. It fosters both critical and analysis and decision making abilities of the individuals. Furthermore, it nurtures knowledge, essential skills and technological development of the individuals. Significantly, class room, platform for sharpening minds, assisted to create intellectual political leaders. For example, Quaid-e-Azam, a wise leader, was flourished his decision-making skills precisely by the class room. His abilities was resulted the independence of Pakistan with negotiation rather than war. However, classroom, is an arena to shape bright minds which empowers economic growth of country. According to World Bank, Japan's economic growth was achieved through High Human development Index (HDI). Additionally, the class room teaches to survive within the society. An ^{well} educated man respects social and cultural norms of society. Moreover, ~~class room~~ quality education enhances the innovation which is important to update infrastructure. For example, In 19th century, industrial revolution made possible by

its intelligent mind sets. In essence, class
room is a institutional foundation for
better present and future.
