Case Study: The production of 5th generation weapons in China.

b- The weaker states enhance the efforts for 'nuclear power status'

Date

Case Study: The efforts of Iran to build nuclear weapons and maintain deterrence in Middle East.

3 - Conclusion.

The Essay

Date _____

War has been the crucial part of development of human civilization since its beginning. From individual murder of Habel by Qabeel to full fledge World Wars in 20th century, the art of war has evolved drastically and posed various threats and consequences to the humanity. However, in 21st century, war is no more a battle between two nations. From genocide in Gaza to sanctions on Russia due to waging war on Ukraine, the unseen consequences of war have effected every aspect of life at individual and global level. With the increase in number of short stand-offs and full-fledge wars, the world is becoming a vulnerable place to live in 21st century due to the consequences of these wars. In modern day, wars have waged the unseen consequences in social, economic, environmental, political, moral, media, intergenerational, and scientific aspects.

To begin with, war has caused a negative impact socially. The society which is directly impacted by war, has to pay by the destruction of social fabric and infrastructure. For instance, the demolishing of houses, hospitals, educational institutes and public cities has turned the society into refugees.

Follow structure of introduction...

War has been the crucial part of development of human civilization since its beginning. From individual murder of Habel by Qabeel to full fledged World Wars in 20th century, the art of war has evolved drastically and posed various threats and consequences to the humanity. However, in 21st century, war is no more a battle between two nations. From genocide in Gaza to sanctions on Russia due to waging war on Ukraine, the unseen consequences of war have effected every aspect of life at individual and global level. With the increase in number of short stand-offs and full-fledged wars, the world is becoming a vulnerable place to live in 21st century due to the consequences of these wars. In modern day, wars have waged the unseen consequences in social, economic, environmental, political, moral, media, intergenerational, and scientific aspects.

To begin with, war has caused a negative impact socially. The society which is directly impacted by war, has to pay by the destruction of social fabric and infrastructure. For instance, the demolishing of houses, hospitals, educational institutes and public cities has turned the society into refugees.

Alongside, the war also builds up an environment of constant fear in people. Gaza, once again, is a clear example of buildup of fear in society. As per UN report, more than 900 people are killed in the lines of getting 'food and water'. The rape attempts of old women by Israeli soldiers and their dogs is another case study to indicate the social fear buildup. Additionally, the war also destroys society by enhanced poverty, unemployment and famine. For example, the Kashmir, the central point of conflict between Pakistan and India, has suffered severe lockdown since August 2019. It ultimately lead to poverty and unemployment of Kashmiris and push them to continuously live in the state of fear. Therefore, the immediate consequence of war is the destruction of social fabric of society.

The economic setback is another major impact of war at individual and global level. As the countries participating in war use maximum revenue for war, the economy of that society shatters. The famine in Gaza are a result of economic degradation in society. At bigger scale, the inflation increases in global market. For example,

The prices of oil and weapons have drastically increased since Ukraine-Russian and Gaza-Palestine conflict. As the number of stand-offs have increased in 2025 e.g. Pakistan-India May stand-off, Iran-Israel June stand-off, the global market is continuously fluctuating in the terms of weapon prices. The loss of Rafaeel by Pakistan has led to a major economic cost to France, while the shares of Chinese company whose jets were used by Pakistan Air force in destruction of Rafaeel, increased accordingly. Additionally, the global market is not the only affectee of war, the global spending on defense also surges due to it. According to Stockholm International Peace Research Institute (SIPRI), world military expenditure reached \$ 2,718 billion in 2024, indicating a 9.4% increase from 2023. It concludes that economic structure of society and globe faces setback due to war.

Bring coherence between body paragraphs by using transitional devices

The environment of war-effected society and world is also damaged due to war. The radioactive particles in environment surges drastically due to war. It makes the environment hazardous. For instance, Hiroshima and Nagasaki, which suffered from nuclear attack by USA during World War II,

have such a hazardous environment that make these cities unable to live. Alongside, the use of weapons and nuclear artilleries during war contribute significantly in increasing the global temperature. For instance, a 2024 report by World Meteorological Organization (WMO) highlights the economic and social losses caused by extreme weather events due to rise in temperature caused by man-made activities including war. Degradation of Biodiversity and harmful effects of war pollutants on human health are another consequence of war. For instance, Agent Orange exposure in Vietnam has affected millions by causing health problems and birth defects. Similar is the case with Hiroshima and Nagasaki, affected by nuclear attack. The deforestation and pollution due to war cause loss of biodiversity at large scale. Therefore, the environment is among primary factors, which are directly facing the harmful consequences of war.
