"Youth and Peace"

In Pakistan about 60 Percent Population is under 30 years. Our young generation is so energetic and passionate, but if their stamina can be used in the right place. Youth or young people of Pakistan are not been included in peacebuilding efforts. Their fresh minds are not being utilize in positive and useful agendas, instead we as a nation wasting our most important treasure of future in extremism. Lack of education in rural areas, growing unemployment, Poverty, political instability and problems due to climate change are making a critical condition where we are risking our own future. Young people are already hopeless due to these problems and Social media furthermore igniting these scenarios. Now youth is involved in extremism, terrorism etc due to Social media's growing role in perception building. These fresh minds don't have their own thinkings and they don't actually know the difference between right and wrong. So extremist can easily use their abilities by manipulating their brains

and utilizing them in the spread of their ideologies. We can look around us and there are a lot of examples where suiciders, bombers and shooters are young. Even in our education system, these terrorist organizations are easily penetrating and using them in radicalization.

As these brains are already frustrated due to country's political instability, growing poverty & unemployment so they are very easy to target and brain-washed. Our government must take action about these worrying scenarios and save the future of country instead of fighting with each other on power sharing and status building. Pakistan youth is full of power and hope and if we invest on them, we are investing on our future. Give them good education, skills, invest on their abilities and build a peaceful and powerful future.
