Conclusion

this essay is not about economic issues
 this is about informal economy

Since its inception, managing the economy has always been one of the biggest challenges facing Pakistan. Instead of stagnant growth, Pakistan has experienced a boom and bust cycle of the economy, characterized by periodic variations from

over-reliance on foreign aid to a capitalistic economy under Ayub, from Bhutto's nationalization policy to various economic models tested under successive governments; unfortunately, no model is succeeded in stabilizing the economic growth. Among all the factors contributing to the economic crisis, the informal economy appears to be the ~~planned topic~~ ^{try to be more sure about} prominent. Pakistan's significant economic challenges are primarily due to the vast size of its informal economy, which hampers the country's socio-economic progress. However, through appropriate policy measures, the informal economy can be regulated and documented, paving the way for long-term economic stability.

Inefficient and ineffective tax collection mechanisms, unchecked smuggling, and unstable economic policies are the main reasons behind the growing informal economy. Furthermore, the widely undocumented economy results in several detrimental consequences such as a decline in revenue generation, easing money laundering, widespread corruption and unequal

resource distribution. However, there exists room for improvement and better outcomes. Certainly, by implementing robust measures, the unchecked economy can be brought into official records. Embracing innovation and technology and capacity building of revenue officers can significantly reduce the informal economy. Additionally, restructuring the tax collection policy and empowering local governments can help bring the informal economy into formal sector.
