

Artificial Intelligence: A Double-Edged Sword Shaping Humanity's Present Crisis

Outline

A- Introduction

Thesis Statement: while artificial intelligence has shaped the human life comfortable, it has several dire and grave repercussion as well; by implementing the doable solutions, human can get maximum benefit out of it.

B- Genesis of Artificial Intelligence

C- Artificial Intelligence Eased Human Crisis

- i- Artificial intelligence : an option through which future can be predicted.
 - a- Satellite surveillance.

b- Case study of MIT

ii- Burgeoning industrial development through artificial intelligence.

a- Automation in Industries

b- Task replacement in labor work.

iii- Inauguration of space technology through artificial intelligence.

a- Space X vision

b- Dream to travel cross planets.

iv- Artificial intelligence minimize time of task completion.

a- AI bots

b- Chatgpt and Deep seek.

v- Manufacturing of robots: evidence of relaxation.

a- American Industry.

D- The Present Sorry Plight of World Amid Artificial Intelligence.

i- Intellectual theft: repercussion of artificial intelligence.

a- Case study of china.

b- Copy-paste machines.

ii- Cyber attacks amid artificial intelligence.

a- Iran- Israel war.

b- Case study of Cameroon.

iii- Unprecedented display of Ads:
brain wash of youth.

a- AI algorithm

b- 21st lesson of 21st century.

iv- Sovereignty breaching strategy by
using artificial intelligence.

a- Satellite capturing.

v- Artificial intelligence left narrow pass
for decision making.

E- Remedial Measures to counter the offshoots of Artificial Intelligence

i- Provision of education to understand
its uses.

a- Seminars.

b- Organizational Awareness.

ii- Development of Action force against
violation.

a- Case study of North Korea.

b- Implementation of policies.

iii- Presence of supra-sovereign over
and above artificial intelligence.

a- USA — world policeman

b- China — model of 'Chinese Dragon'

iv- setting down the threshold of
controlling mind set.

v-

F- Conclusion

DATE: ___/___/___

Artificial intelligence is powerful servant and a dangerous master. Starting from birth of child to adult age, beginning of wheel to manufacturing of aircrafts, looking from global north to global south artificial intelligence has shaped the world differently. At one side it has blessed human life with multitudes of benefits, while on other it has dire and far-reaching offshoots. Artificial intelligence is considered as double-edged sword. This is a way forward to predict future actions through surveillance of satellite. Moreover, industrial development at breakneck pace is other application. This great technology has eased human life by minimizing the task completion time in day to day routine. Not only this, Artificial intelligence helps to manufacture the robots which ultimately become helping hand of humans. However, after the prevailing notion of artificial intelligence, intellectual theft became a question of every professional. Additionally,

cyber attack become the daily task which create strong stumbling block in the privacy of individual and state. This can be countered through a rational approach and pragmatic solution. So, while artificial intelligence has shaped the human life comfortable, it has several dire and grave repercussion as well; by implementing the double solutions, Human can get maximum benefit out of it.

Both of artificial intelligence is the outcome of Facebook. In 2006, the world started rapidly moving towards artificial intelligence, where by innumerable factors become instrumental for artificial intelligence. Algorithm designing to interpreting the mindset of users became an unfolding strength of technology. However, in recent years artificial intelligence has surpassed the minds of individuals. Mission of USA - vision of Elon - has shaped complete world differently. In 2010, it was not even possible

to think of cross planet flights. But, it has become not only possible but also its just a moments away from humans.

There are multitudes of benefits artificial intelligence has bestowed upon humans; one among them is future predictability. Future prediction through satellite is as easy as thinking to make (AI) models. Satellite surveillance became an application through which natural disaster, flood, weather forecast, and crop cultivation can be predicted. The case study of MIT institute has come up with an argument that satellite is playing an important role in fostering economy of any country. Ergo, future prediction is only possible through satellite.

Second, burgeoning industrial development with the help of artificial intelligence is other blessing of this technology.
