

Topic:

Benefits of Artificial Intelligence

Artificial intelligence becomes the part of our daily life. In today's life, one

cannot assume a life without AI. Artificial Intelligence technologies or machines are working in every sector from industry to marketing, lab research to galaxy or universe research, autonomous vehicles to Satellites and healthcare to Scientific research. There is no confusion to say that AI becomes essential part of life for individual like oxygen and water. Robot is one of the biggest innovation of Artificial intelligence. Robots are designed by using AI algorithms, deep learning and machine learning to perform various task. Robots are designed to work efficiently, effectively and faster than human being. In industries robots are working to manufacture products and ensure that product is of high quality. At a single time, robot can manufacture multiple products with high quality. Robots are also helpful in performing difficult and complex surgeries easily. Robots can easily tackle surgeries and improve patient conditions. Artificial Intelligence is also used in online business or e-commerce websites such as Amazon, Walmart or Shopify. By using these websites people start earning handsome amount and people could also perform their jobs or task on these websites by sitting home. For Boosting sales and ~~also~~ revenue AI marketing tools can be used. Such as posting marketing videos on facebook and youtube can enhance and upgrade

sales of a business. Automated home is one of the application of AI, in which IoT based embedded system is implemented. Automated home protect home from robbers and thieves. AI developed vacuum cleaners are helpful to make home neat and clean. Vacuum cleaners are developed on AI, machine learning and deep learning algorithms. Vacuum cleaners cleans the area autonomously and by using its sensors. Autonomous cars, bikes and airplane are helpful in immediate and urgent conditions. Autonomous vehicle also reduce the chance of accident. Artificial Intelligence is also helpful in healthcare systems. Artificial intelligence techniques reduced the mortality rate and improve patient conditions. Artificial Intelligence satellites and radars are helpful to understanding universe, planets such as mercury, venus, mars, moons and galaxy galaxies such as Milky Way. Artificial Intelligence ~~are~~ is also helpful for future predictions such as merging of multiple galaxy galaxies, stellar remnants and solar eclipse. Scientist used artificial intelligence to advance their knowledge and to find the solution of severe critical disease. AI developed chatbots are used in,

customer service industries for customer services -
AI chatbots are helpful for customer satisfaction. Artificial intelligence increases the skillfull advancement for individuals. Artificial intelligence generates creative thinking and productive job opportunities for individuals. (419)
