③ Arguments which manifest that Brain Drain is a Momentary Benefit;

③.1 Rise in inflows of remittances

③.2 Knowledge transfer upon their return

④ Conclusion

Post-dinner conversations in most urban middle-class households start these days with commentaries on the unstable politics of and abysmal economic situations and end with the concern about the youth migrating from the third-world countries to the seemingly greener pastures of the first-world countries. This youth exodus is commonly known as brain drain, which refers to the migration of highly skilled intellectual and technical forces to foreign lands. Brain drain is believed to be a long-term disaster for a country because it has severe repercussions for the home country. It results into the loss of skilled engineers and IT experts. The health sector of a country also suffers from the departure of doctors and nurses. Furthermore, the economy depletes due to the emigration of professional across various

Piz cut short sentences from here...these are too long

sectors. Additionally, investments in higher ^{Has lost} education are lost due to the influence of brain drain. Moreover, brain drain entails loss of strategic manpower from key positions. In addition, it leads to a lack of political representation for the younger generation. Moving forward, brain drain also damages the social and cultural tapestry of a country. ~~Therefore~~ ^{hence}, it is believed that brain drain is a momentary benefit for a country. ^{They argue that} ~~Because of~~ brain drain the inflow of remittances rise, which fills external deficits. Although this foreign inflow is crucial to maintain foreign exchange reserves, ~~but it is not a long-term solution.~~ ~~At~~ countries are not run on the remittance. ~~Hence~~, it can be deduced that brain drain is a long-term disaster, rather than a momentary benefit.

Avoid writing in passive plz

To begin, brain drain is believed to be a burden on national expenditure of a country because the state invests substantial amounts of money in building human capital through ^{Public} schooling, heavily subsidized universities and professional ~~educational institutions~~. These individuals are trained to contribute to national development by serving in public institutions. However, when these professionals ~~to~~ developed countries for better livelihood, this investment is lost. Additionally, to fill this gap, which is created due to ~~maximisation~~ of ~~good~~ skilled workforce, the government hires foreign experts at much higher costs, adding further burden on national expenditure. Such ~~events~~ ^{cycle} of events represent ~~the~~ loss for a home country. According to the Associated Chamber of Commerce and Industry of India, Indian students studying or working abroad cost India as much as 17 billion ~~that~~ a year in lost revenue. Thus, brain drain results

into burden on national expenditure of a country.

On the other hand, it is believed that brain drain is a momentary benefit. Because of brain drain a country receives vast amount of remittances. These remittances help in filling large external deficits. Although this foreign currency ~~inflow~~ flow is crucial to maintain foreign exchange reserves, ~~but~~ it is not a long-term solution. Countries are not run on remittances. Any global economic shock can drastically change the situation. And most importantly, this migration comes with economic costs. Therefore brain drain is ~~is~~ not a momentary benefit, but it is a long-term disaster.

Plz prove how brain drain is a real issue here

In a nutshell, ~~the brain drain~~
~~leads to a brain drain~~
~~which is a~~ First, it tends
to be a burden on economy, as skilled
population emigration forces the government to
hire foreign experts at higher rates. Furthermore,
due to departure of doctors and
nurses, health sector suffers. Moreover,
country's industrial and technological
progress is halted due to loss of
skilled engineers and experts. In addition,
the calibre of people residing in the
country falls which negatively affects the
development of society. It also leads
into the loss of investments in
higher education because youth getting
subsidised education in home country be-
comes an asset for a host country.
However, the argument that it is a
netting benefit because it is a
knowledge transfer upon their return to
the home country. In fact, according
to a survey, among those leaving

their home country ~~no~~ wants to
come back. Rather the ~~chance~~ to be
an asset for the host country by
providing their services. Hence ~~according~~
to the witnesses provided in the essay,
it can be argued ~~that~~ brain drain
is a long-term disaster. However,
brain drain can be turned into brain
gain by applying certain policies and by
introducing ~~form~~ such as providing
~~new new~~ research and development infrastructures,
better opportunities and a system of merit
be adopted.
