

Qno:4 Suppose the weaknesses of Rene Descartes' Cogito argument. Outline the influence of Cogito on later modern philosophy.

ANSWER:

(1) INTRODUCTION

Rene Descartes was a French philosopher who is called the Father of Modern philosophy. He published his famous work 'Discourse on the Method', where he introduced the line 'Cogito ergo sum' ('I think, therefore I am') to find certain knowledge and laid the foundation for rationalism. He shifted philosophy from scholasticism to a critical, individualist framework. Also, he created the mind/body problem, shaping centuries of debate in metaphysics.

Try to avoid figures in your introduction, and try to give comprehensive idea of your answer in your introduction that portrays psychological impact on the examiner.

② Weaknesses of the Cogito Argument

(a) Presupposition of the 'I'

Descartes assume that the act of thinking implies a distinct subject ("I"). Critics argue that he assume there is a real "I" (a full individual self) behind this thinking without proving it first.

4 The self might not be as stable or "Real as Descartes thinks." — Hume.

(b) Cartesian Circle (Circularity)

Descartes says that he knows his ideas are clear and true because God (non-deceiver) guarantees them. He then says that he knows that God is not a deceiver because his ideas tell him so. That's a circle where each point leans on the other. There is no independent proof and this tangled logic is the Cartesian circle.

(c) Infallible Introspection

Descartes believed that the first-person

Try to examples as well.

point of view is the most reliable source of knowledge. However, mind can be tricked into illusions and delusions.

(4) Ambiguity of Thinking

Descartes believed that the act of thinking proves the existence of the self. But 'thinking' involves a broad range of mental activities. Thinking itself is not enough to prove 'I' exists. Not all these states ranging from doubting to feeling show a unified, conscious thinker.

(5) Solipsistic Drift

Descartes' cogito guarantees only the existence of the self doing the thinking. Without a secure bridge from that self to the external world, it risks the solipsistic drift.

"Even if I know that I think, how do I know you're not just a figment of my own mind?" - Descartes

(6) Mind-Body Dualism Fallacy

In meditations on first philosophy, Descartes said: "I am a thinking thing (*cogito*)" - a mind distinct from the body.

The body ^{is} proven only indirectly, while the *cogito* proves mind's existence through thought.

This sharp ontological split was mocked by philosophers as "ghost in the machine".

"If the mind is immaterial and the body is physical; how do they interact?"

(7) Neglect of Embodiment

Cogito overlooks that we are physical

social beings. He focused on pure thinking

, apart from the body. He treated the

thinking self as separate from the

flesh-and-blood existence. By ignoring

embodiment, Descartes exclude bodily

experience.

Make it properly

(3) Influence of Cogito on Later Modern Philosophy

(a) Birth of Subjectivity

Before Descartes, thinkers often focused on God, nature, or abstract principles as the starting point. With Cogito, Descartes shifted this objectivity and introduced the first-person perspective.

(b) Rationalist Epistemology

Descartes inspired Leibniz and Spinoza to seek knowledge through reason alone, reinforcing the rationalist tradition. He was the father of modern rationalism based on deductive logic.

(c) Empiricist Challenge

Descartes said that thinking proves there is a thinking subject - the "I". It inspired Hume to posit his theory of bundle of self. All we have are fleeting thoughts and

and there is no proof of a stable "I".
There is just the stream, no permanent
"you".

D) Kant's Transcendental Time

Kant adopted Descartes' focus on the
conditions for possibility of experience.

He turned the focus from the object of
knowledge to the subject itself (the human
mind). However, Descartes was interested
in what we know, not how we know it.

(5) Phenomenology and Consciousness

Phenomenologists like Husserl and Heidegger
criticized Descartes for treating mind as
something floating alone. Instead, they
stressed consciousness is always connected
to the body and the world we live in.

The everyday world (Lebenswelt) we live in

shapes our mind and the way we experience the world.

Rise of (6) Existentialism

Sartre, a 20th-century existentialist, agreed that consciousness proves existence and he rejected Descartes' idea of a fixed, unchanging self. Sartre asserted that we are not fixed beings, but always free to shape and change who we are.

"Consciousness is nothing in itself. It is always becoming." — Sartre

Provoked (7) Post-structural Critique

Deleuze, a post-structuralist, argued that Descartes' cogito argument depends on a stable, self-present self ('I'). He argued that this 'I' is a textual construct which is based on language. It relies on other signs and contexts.

"I is always deferred, never fully present." — Deleuze.

(18) Lasting Impact on Modern cognitive Science

Modern research in cognitive science and neuroscience challenges Descartes' idea of a single, clear, and stable thinking self. Studies show that our mind is deeply connected to body, emotions and external world. So, "I" cannot exist in isolation rather it is dynamic, embodied, and

Conclusion

Descartes' cogito argument laid the cornerstone of modern philosophy by grounding knowledge in certainty of thought. It initiated a new era of subject-centred rationalism but has its own limitations such as mind-body dualism, solipsistic tendencies, and disembodied introspection. Yet, its influence on Kantian transcendentalism and Sartre's existentialism to Heidegger's deconstruction has greatly enriched philosophical discourse.
