literature:

(a) Example of Sharmin Obaid

(b) Han Kang: Noble Prize winner
in literature (2024)

§ : Conclusion

Frailty is No More the Name of Woman

Mama! Wifey! Madam!
Please do it for me. It is getting
too late. Everywhere she hears her
name being called, commanded, and
requested. Annie opens her eyes and
sighs. "Oh my God! It was just a
dream, but silly people can't not
even work without me in dreams
too." She then goes out of the room
and takes her two heavy dumbbells
and thinks, "I do every kind of
work as man do and contribute
more in society than men, then why
woman was once called frail?"
Above anecdote related to Annie's
life depict that woman do all the
works that man do. She is physically,
emotionally, and economically strong
like her male counterparts. However,
woman was considered frail in
past, as Shakespeare represents in
his play 'Hamlet'. In contrast, woman

like Sirrena Williams, Malala Yusuf-zai, Mukhtar an Mai, and Nita Ambani lead every sector of life. That's why, the outdated concept of her frailty is neglected nowadays. Although, woman was once considered frail for her socio-economic roles, she has proved through her achievements in sports, literature, business and science that frailty is no more the name of woman.
