

Essay PM'S Sindh-2021.

Future of remote learning.

I. Introduction

II. Possible outcomes of remote learning in future.

- A. Gives easy access to updated knowledge
- B. Quality education will be ^{achievable} ~~available~~ for everyone.
- C. Remote learning will be a conduit to learn modern skills
- D. Reduces gender based educational divide
- E. Creates employment at all digital platforms
- F. Reduces the burden of expenditure ~~by~~ over governments in traditional learning

III. Some peculiarities of remote learning in future

- A. ~~Increased~~ Online child abuse will be increased

B. Complicated threats to individual privacy will become more.

C. Recipients may face health issues due to uncontrolled screen timing

IX. Some suggested measures to counter these peculiarities for making remote learning more optimistic in future.

A. Ensuring early legislation

B. Robust Cyber Security measures to ensure individual privacy

C. Educating people for careful usage of these electronic devices

X. Conclusion

Throughout ~~since~~ the evolution of human beings, people have been learning in the way society taught them. As learning has been part of everyone's life, they couldn't keep them away from it. Moreover, each and every person had specifications in related fields, but which helped them in life. Therefore, the evolution of human history tells how the learning process has shaped the future of people. Similarly, in today's modern world especially after Covid-19, remote learning has become the way to acquire knowledge and information through electronic devices without sitting in the traditional type of classrooms. As different methods of learning shaped the future of people, remote learning is also on its way to do so. Therefore, there are multiple outcomes of remote learning in future. Firstly from getting rid of outdated syllabus, it will make easy for people to get updated knowledge. Similarly, education will not only be achievable for those who can afford it, but all will have easy access to quality education. It will become a way to get modern skills irrespective of gender creating multiple job opportunities. However, research shows that remote learning may

have some possible peculiarities in future including increased child abuse and ^{leaving} individual privacies at risk. On the other hand these difficulties will be resolved by ensuring early legislation, by having robust cyber security ~~and~~ followed by social awareness among masses for careful usage of these electronic devices. In simple words, future of remote learning is bright because of its positive outcomes. It is the simplest way of educating people irrespective of any caste, colour, or class. However, there will be some problems, but early measures would be beneficial.

Moving ahead, the first and the foremost thing, which remote learning will do in future is - Easy access to updated knowledge. Remote learning ~~is~~ will make people get rid of outdated syllabus. Moreover, there are multiple platforms that every time keep people aware all sort of developments. As in Scandinavian countries like Finland, government just ensured uninterrupted internet, students utilized it in getting online education, resulted in the development of student's capacity because of updated things. Similarly, it keeps all aware of modern

development. Hence, remote learning will provide easy access to updated knowledge.

Furthermore, in conjunction with possible positive outcomes there will ^{be} some issues created by remote learning. One of the most leading issues will be increased ^{online} child abuse. As remote learning is only possible with having mobiles, laptops, personal computers, uninterrupted internet, and among others. In this situation, if children have all these facilities, it will be easy for ^{them} ~~him~~ to access pornography, and other unethical things. However, children will be the most affected segment of society. Moreover, these equipment will make children ^{vulnerable} ~~exposed~~ to online abuse which will affect their character building. Researchers have stated that children are getting more involved in pornography day by day. Ultimately, the more the children have access to electronic devices, the more they will be involved in unethical things which ultimately increase child abuse.

Moreover, these problems can be resolved if strict measures are taken earlier by the governments. One of the solutions to counter problems like child abuse, early legislation will be reliable.

or solution. Moreover, looking at the growing number of digital threats, nations as well as digital parliaments have to make laws children friendly. Recent For instance, Australian parliament has passed the law by which children of sixteen years cannot have social media accounts. This legislation resulted in the only country Australia in which the rate of online children abuse has declined. Similarly, if such laws are passed and enacted strictly, it would resolve the problem of child abuse. Hence, legislation will play role in providing only knowledge based things to children.

In conclusion, remote learning has no doubt a brighter future, but some problems will prevail with the passage of time. However, these problems are not long lasting there can be resolved by suggested measures. Therefore, it is hoped that remote learning will be diligently increasing the capacity and character building of people which are the needs of today's world. In this way, people would be educated, their multiple problems be resolved if education through online platforms becomes easy.
