3.3.1. Providing competitive incentives

3.3.2. Creating Special Economic Zones for Skilled workers

3.3.3. Government-led initiatives that invite skilled migrants back with guaranteed jobs and benefits

4. Conclusion.

4.1. Thesis restated, summary of ideas

4.2. Concluding Thoughts.

The Essay

According to the World Bank, over 30% of professionals from developing countries migrate to advanced economies each year in search of better opportunities. Brain drain has become an alarming issue globally, particularly in developing nations where talented professionals are increasingly migrating to developed countries in search of better opportunities.

Unfortunately, Pakistan faces the persistent challenges of this trend. The World Bank reports that more than 10,000 Pakistani doctors have migrated abroad in the past two decades, many settling in countries like United States, the UK, and the Gulf states.

There are several causes of brain drain which deepens the gap between developed and ~~developing nations~~ such as Economic factors, lack of career growth and professional development, high taxation, political and religious discrimination, overpopulation and resource scarcity, which can lead to the consequences like economic loss, weakening of key sectors, decrease in innovation and competitiveness, loss of cultural identity and nationalism, and Demographic imbalance.

Therefore, it is in urgent need of reforms that can retain its talented professionals and reverse the brain drain before it becomes even more detrimental to the nation's future.

General comments

No need of. Flow chart in essay

Should be more formal

Subject. -verb agreement mistakes

Good but arguments can be made more diverse such as mention what are the pull factors that are attracting people

Loss of constructive minds

Mention evidences to support your arguments

Give pertinent solutions and how that can be achieved
