Title:

Importance of Urban Green Spaces.

The life in large cities is busy ^{and exhausting} but in that fast paced life community parks play a important role for people to relax themselves and ease their mind. As Natural environment is so necessary for mental health. Urban forestation not only keeps the balance between concrete infrastructure and natural environment but it ~~is~~ also plays an important role in community service and socializing of urban population. Greenary also mitigate the harmful effects on climate. The real challenge is to keep the balance between urban infrastructure and green spaces. The aim should be on proper city planning in such a way that can foster coexistence of modern cities and natural environment.
