Global warming

Is a serious existential challenge!.

Global warming is most dangerous because raising of temperature in whole world
Are bring... such passives do
not convey any meanings
Glaciers are melting mill because of
temperature. In Pakistan many areas
are un urbanized many people cut the
trees from different places and they construct
building on them places. Many industries
are located in Pakistan and these.
Industries run huge amount of fuels
and do major pollution city. Pakistan
Should do more plantation and more
forestation. All industries should be
converted into renewable energy. Pakistan
should control all transports who
use fossil fuel and take action to
convert into renewable energy. In
controlling raising of temperature
by use fossil fuel and deforestation
and construction of buildings. Every
country should take action in the
purpose of raising temperature and
control carbon emission.
