BRAINSTORMING

Climote change : Causes and Consequences

Outline:

1- Introduction

Hook ✓

Background ✓

Thesis statement: Industrialization, burning of fossil fuels and deforestation are the major causes behind ozone depletion and green house effect. The solutions are there and need to be addressed to save the planet. ✓

2- Causes

2.1 Burning of Fossil Fuels ✓

For electricity generation ✓

Automobiles ✓

u can write more appropriate and in length phrases

2.2 Industrialization ✓

Release harmful chemicals ✓

No proper waste management ✓

2.3 Deforestation ✓

less CO_2 absorption ✓

2.4 Limited legal measures

Date: _____

Day: _____

Rising population

No awareness

2.5 Economic causes

Alternatives expensive

3. Consequences

3.1 Ozone depletion

Greenhouse effect

Heat wave

3.2 Acid rain

Damaging infrastructure

rising floods
Polluting water

3.3 Floods

Economic loss

Human and animal loss

3.4 Health issues

Skin diseases

Rising cancer

3.5 Rising of sea level

Melting glaciers

4. Solution

4.1 Tree plantation

4.2 Awareness

4.3 International agreements

5. Conclusion

Essay

Climate change is no more doom's day prophecy, ~~it's~~ a reality. In 1896, a Swedish scientist highlighted that the rise in level of CO_2 in atmosphere will increase the temperature of the planet through greenhouse effect. In 20th century, many protocols and agreements were signed by different countries to counter ozone depletion. The consequences are more evident and severe in 21st century with the advancement in technology. The problem is diversification of perspective, even today many people think that climate change is a myth, including US president Donald Trump. The developing countries are polluting the planet from 18th and 19th century. So, it is their responsibility more than others to make Earth as a liveable place. However, the major emitters of CO_2 in present time are developing

countries like China and India. Everyone contributed in climate change. Therefore, it is universal responsibility to find the solution and minimize the consequences. ~~This essay will discuss how industrialization, burning of fossil fuels and deforestation are the major causes behind ozone depletion and greenhouse effect. The solutions are their and need to be addressed to save the planet.~~
