How is AI a threat to humanity?

As AI-Artificial Intelligence has eased our lives, its negative implications are increasing day by day. Firstly, job automation that means *replacing* displacing humans by AI, which means now millions of people has to find another work to put bread on the table. Secondly, due to lack of regulation and lack of global coordination, AI may bring tensions between states and which may lead to geo-political tensions. Thirdly, AI will change the way of conflicts *will alter the nature of conflict* between countries, as AI made robots, drones and nanorobots are far more dangerous than nukes. Thirdly, AI's face recognition capabilities is a great security concern by accessing mobile phones and homes. Moreover, AI-led deep fakes are threat for people specially politicians, & celebrities, by making their voice or face being used in any type of conspiracy. Last but not the least, the great threat for humans is if AI surpasses humans and could not align them, then it will the biggest mistake of humans. In a nut-shell, human *humans have to* have to make long-term planning, as AI is a great threat for humankind.

overall good structure

plz write with proper subject

Serious mistake
