4 Conclusion:

During the world war II, Churchill was about to destruct the colleges and universities in Europe but Hitler has said him that do not destruct the institutions that are providing education, I will save your family if you are not able to do so. Churchill agreed to this deal and he saved the institutions of the Europe. Afterwards, Oxford and Cambridge universities has emerged one of the biggest educational sectors that are providing education westwards. From this small scenario, it is proved that how the educational system is immensely important for a nation in order to prosper. Article 25(A) of the Constitution of Pakistan provides free and fair education to every child around the age of five to sixteen years. However, Pakistan has currently 92.5 million students out of school according to recent report of UNICEF. owing to the fact, that there are multiple ills in the higher educational system of Pakistan such as poor infrastructure, old curriculum, lack of competent and specialist teachers, very poor technology in higher institutions. These issues must be tackled with their proper remedies such as development in

the infrastructural system, curriculum must be updated every year, competent and subject specialized teachers must be provided in higher institutions; as the new modern era is going on therefore, students shall also be provided with technology for the betterment of their futures.

The first and the foremost issue that mass students are facing is infrastructural problems in their institutions. The buildings of the schools, colleges and universities are very old. The recent case of that's district highlighted that owing to the destructed wall of the school a minor girl was became the victim of collapsed wall. Therefore, those institutions that are very old must be repaired on time so that students safety is assured. Meanwhile, the facility of washrooms and the availability of soaps and handwashes states is also very dismal. Most of the school especially the public sector schools are devoid with the sanitation facility, student face multiple hygiene related problems. Despite of this, the availability of water for drinking is also abysmal. Most of the higher education institutions lack basic facility of pure drinking water. If drinking

plz work on transition of ideas from one passage to another

break your lengthy sentences please

water is not pure then the chances of water borne diseases shall be increased such as cholera, typhoid, etc.

The second issue related to higher education in pakistan is old curriculum. The curriculum is very old. Therefore, student show ^{no} ~~any~~ interest in studies. The concepts, the chapters, the topics are very old in curriculum with ~~no~~ any updation. Meanwhile, Research and Development skills for student is also abysmal. Most of the institutions ~~lack the research Department~~ for students. Nowadays, there is a modern and technology era, in this era Research is very much ~~important~~ for students. unfortunately pakistan's many institutions lack this department. However, analytical and technical skills are also not provided to youngsters for their grooming.

The third issue faced by the higher education in pakistan is teacher related factor. Most of the government institutions of pakistan are devoid of teacher because their teacher staff is absent most of the days. If teachers will be absent how students should be getting education. Moreover, students

have provided with visiting faculty ~~teach~~^{teaching} who are non specialist at their ~~subject~~^{teaching} or, they are provided with teacher ~~lacking~~^{teaching} subject specialization skills. Most of the teachers have ~~not~~^{any} experience, ~~no~~^{any} skills, and ~~no~~^{any} training related to their subject which they are teaching in ~~instituti~~^{on}. The Fourth all faced by ^{the} higher educations of Pakistan are technology related. This era is the era of Industrialization and modernization. In this era most of the higher ~~institutes~~^{on} lack modern technology such as computer labs in which student shall practice their computer skills, excel, powerpoints, Microsoft word. These are some basic skills that should be incorporated in youngster. Unfortunately, owing to lack of computer labs students are devoid of basic computer skills. Those students who have their mobile phones, laptops or ipads they do not provide with the facility of wifi to learn online skills. In spite of this, the book issuance of libraries to students is only for three to five days after which they return to their libraries back. Therefore, Electronic libraries must be provided to students.

for their better learning. However, statistical tools are also not present in many of the higher institutions in pakistan. Such as, statistical application of social sciences this is an research based tool, it should be provided to higher institution in pakistan.

The last ~~all~~ related to other factors of higher Education system in pakistan is: Very high and expensive fees of private Educational institutions of pakistan. Their fees is very high that parents sell their gold, plots and houses just for their students education. Moreover, the Educational opportunities to rural areas students is alarmingly low. Their local rural areas is mostly devoid with good educational institutions. Therefore, they need transport to come from rural areas to far areas for their education. Unfortunately, most of the rural areas parents could not have this transport availability and students are devoid of ^{geony} education which is their basic right according to the Article (25)(h) of the constitution. In the same way, young

girls in pakistan have their intense drop out ratio. According to unicef 18.9 million young girls are marriage before 18 years and 4.6 million young girls are married before even 16 years of age. On other report, pakistan has ranked second most highest out of school children with an estimated 22.8 million aged five to sixteen years, not attending school as per recent data of unicef.

There are multiple issues that higher education of pakistan is facing such as infrastructural issues, old curriculum related ills, Teacher related ills, lack of technology in higher institutions for students. In order to become a civilized student of a nation, the higher authorities must tackle the above mentioned issues.

Dear Sir, I have only addressed ills in this essay, last one is transitory paragraph. Please do let me know my mistakes so that I can work more. Thankyou 😊
