

Title: Differences in Hot and Cold climate

The effects of cold climate manifest in Northern Europe. The obstacles of these variations related to man energies - There are no ways for exercise to boost energy but we have a hope to overcome difficulties. Cold climate numbs human energies but hot climate gives a little motivation. So in this case, cold climate impacts on human race. To protect ourselves from this situation, man has to build strong houses, wear thick clothes, hew down trees and coal outside the earth take for fires, ^{and} used nourishing food for survival. Contrary to this, neighbour countries of equator needs little usage of clothes, fire, and food. The different seasons of year highlight the humans in tropics and others who are in temperate climes and vice versa.
