4) conclusion

"Introduction"

After the Second world war, new technological war had been starting between super power countries. The countries had started investing in technology. With the passage of time, the technology has developed and information technology has expanded. People believe that expanding information technology is blessings because with the help of it students are pursuing online education, making communication easier, and saving time and cost. However, these people are unaware of real facts and figures because of it online banking fraud has been increased, creating communication gap between developing areas and under developing areas, increasing cyber attacks, using proxies, having no privacy, spreading

fake news, and creating physical health problems due to lack of physical activities. This essay will highlight that expanding information technology is a curse rather than blessings.

"Conclusion"

In view of the above arguments this essay^{is} mentioned that expanding information is blessing in people's point of view because it is saving time and cost, making communication easier, and pursuing online education. However, in reality, expanding information technology is a curse rather than blessing. Due to online banking fraud, creating communication gap, increasing cyberattacks, using proxies, having no privacy, spreading fake news, and creating physical health problems. This shows that ~~the~~ expanding information technology is a curse rather than blessings.
