

man is an ~~Economic~~ fool. ✓

CSS - 1974

Man was an expert of tools ✓ but his ability to use them was always in doubt. The first innovation of man was combustion which helped him to get warm, to scare preying animals and ✓ to manage food. After ages, it was discovered that fire could also be used for metal extraction and power generation. It started from the use of fire as weapon to building explosives for the destruction of human beings. ~~Moreover, man had never been so~~ Good in utilizing gases. He had poisoned the air with his ~~unattended~~ emissions. Now, he is unable to filter air and chose the right air for him. ~~It is all what he breathes.~~ Furthermore, man had also managed to fly, putting birds in danger. He had also managed to use water for his daily life purposes. Other than animals, he also used it for power generation. ~~But, above this, water imbalance could harm him badly.~~

Despite all, man was unable to utilize natural resources wisely. Man cut trees, killed bison, turned fertile land to infertility, misused rich land for his artificial needs. He even destroyed food carelessly and replaced man with machines causing unemployment. It concludes that man is an economic fool.

Both german powers
Both ger

CSS- 1972.

George Clark in his book English history wrote about the resemblances and differences of both German wars. Both started with a bid on power and ended with German defeat. The US rescued in both wars after years of neutrality. But power paradigms were different in both wars. Italy and Japan favoured Germany while Russia, Poland and Baltic were in opposition. Despite American advice on reconciliation, there were heinous blind strikes ~~which~~ lasted long. Civilians were greatly affected by war and hunger. Moreover, German resources were limited but there was union in them after severe eight months. Fight spread from Pacific to Europe. Also, the physicist made huge discoveries during this era. However, there was nothing tough like the former warfare inspite of having all types of warfare technologies by both sides.
