

WILDLIFE HAS [✓]LOST
THE [✓]LIFE PART

1) INTRODUCTION:-

THESES STATEMENT:- It is
evident that [✓]wildlife has
lost its [✓]life part.

2 Why [✓]Wild - Life HAS
lost [✓]its Life part.

2.1 Massive [✓]deforestation.

2.2 [✓]Urbanization.

2.3 Rapid [✓]Industrialization.

2.4 No [✓]strict laws implementation.

one word substitution does
not convey any sense

2.5 ~~Ocean~~ ~~acidification.~~

2.6 Illegal ~~hunting~~ ~~of~~
wildlife.

2.7 Installation ~~of~~ ~~electric.~~
grid ~~stations~~ ~~in~~ forests.

2.8 Encroachment ~~on~~ ~~green~~
spaces.

2.9 ~~Glaciers~~ ~~melting.~~

3 ~~SOLUTIONS.~~

3.1 ~~Reforestation~~

3.2 Planned ~~urbanization~~

3.3 Strict ~~enforcement~~ ~~of~~ laws

to protect ~~wild~~ life

3.4 Installation of electric
grid from stations away
wildlife habitat.

4 CONCLUSION:

INTRODUCTION

According to an article published in the New York Times, polar bears' population has decreased to about 10 percent

due to change in their habitat. This article

emphasizes that due to change in habitat wildlife

is declining. Wildlife refers to animals living on land and in water

freely. Unfortunately, there are many reasons leading to decline of wildlife. To start

with, deforestation is the main cause. Moreover,

urbanization and rapid industrialization also add to the cause. Furthermore,

ocean acidification and

glaciers melting leads to wildlife losing its life part.

However, it is high time
to protect wildlife from
declining. By reforestation, we
can protect wildlife from
losing its life part. Additionally,
planned urbanization and
building electric grid station
away from wildlife
will ~~leads~~ to restoring
wildlife. Hence, it is evident
that wildlife has lost
its life part.

1 Body Para

To start with, deforestation is the main cause of wildlife decline. Forests are home for around eighty percent of terrestrial animals, their destruction pushes many animals and plants to extinction. According to a report published by United Nations (UN), around 8.1 million hectares of forest are cleared each year. Hence, deforestation is the main cause of wildlife decline.
