6) Conclusion

In the 21st century, the universe sees the unabated use of artificial intelligence. None can deny with the fact that the rapid progress in the cosmos is the result of artificial intelligence adoption. On the other hand, there is famous saying excess of everything is bad. It manifests that the use of anything is beneficial until it is not over-used. Unfortunately, over-reliance on artificial intelligence is proving disastrous for human's cognition and perception. Its basic manifestation is the death of creativity. It is quite surprising that the product leads the master when it gains excessive importance. In this regard, there are some pointnotes which show that "the artificial intelligence (AI) is the major reason behind the

suppressing rationality of mankind.

These factors are the negligence of conventional method of education, changing of job requirements.

uncontrolled ~~intend~~ introducing of AI into everyday processes, and excessive reliance over AI for decision-making.

Additionally, there are some reasons behind every revolution and alteration. In this sense,

there are various causes behind the extensive use of AI and

the casualty of inventing and discovering new things. Some of them are yearning for more

profiteering in this materialistic

world, living for hegemony, eagerness for efficiency, and wishing

for robust data ^{driven} system.

Moreover, there is need to adopt some pertinent measures to

overcome the negative aspects rather than ignoring the positive

features. Those steps can be the promotion of the significance of traditional methods over injurious modern techniques, and increasing the awareness about vocational training programs. Thus, AI is one of the major tools of development in this modernizing age, but it is also the main reason behind the death of creativity due to many logical factors; however, this negative perspective and aspect of AI can be controlled by adopting some affirmative steps.

Structure of introduction is okay
