### Final Draft

# Boredom in Animals and Humans

Boredom as a factor of human?

behaviour has less realized. Currently, boredom gains more motive power than pain and is a unique power. It has been seen in imprisoned animals that they feel restless, low esteemed and uncomfortable. On the other hand, in natural environment, they feel free and excited. They stay alert about their enemies or busy in food gathering and home warming. That is why, boredom in even unhappy situation is not felt. Apes are also predicted for resemblance with us but not claimed by observations. However, contradiction in present and ideal state cause boredom is one important element. Second is that, when ~~you~~ <sup>us</sup> there is nothing to do, boredom felt.

Therefore, it has been observed that the boredom lacks when someone is even in unpleasant situation. because boredom not only stops unpleasant but also pleasant events to stops. That is why, word in contrary of boredom is excitemt.

main idea is picked and discussed  
rewrite the underlined parts over all content is fine  
basic grammar needs attention 8/20
