VII - Sponge cities of China is a model to make Climate resistant cities.

VIII - Conclusion.

Climate Change is one the natural bomb that can destroy any country without the use of atomic bomb. The average temprature of world is increasing every year. By this reason

glaciers are melting. And the level of sea water is raising. And in future million$\textcolor{red}{s}$ of people could be displaced. In the response level of poverty and inflation will increase. And unplanned urbanization create affects on different sectors. And world will faced the crises of food. The demand of energy is raising due to increasing of temprature. And now the order of world is Changing from non-renewable sources to renewable sources of energy. And trying to reduce the emission of carbon. Of we converge the debate, Climat Change is a serious problem that affecting on different sectors. And the results is directly affecting on social and economic factors.
