Urbanization and Conservation — Hand in Glove Green Urbanization Cities Rooted in Nature

Green spaces in cities serve as places of relaxation and recreation. Their advantages include fresh air, temperature drops, and positive health outcomes. However, striking a balance between ^{rapid} ^{urbanization} expanding cities and nature preservation is challenging. To achieve that, it is mandatory to make a shift to sustainable development. Steps involving plantation of trees and introduction of parks are vital to improving human and environmental health. It calls for a concerted effort to create harmony between human development and environmental preservation.
