

climat change: causes and consequences

Outline

(1) Introduction

1.1 Hook

1.2 Background

1.3 Thesis: Climate change is the phenomenon of the whole world, it has arisen from the excessive use of fossil fuels, industrialization, deforestation and technological warfare, and it has insidious environmental, social, political and economic effects on human lives.

(2) Causes of climate change.

2.1 A massive burning of fossil fuels

2.1.1 . Industrialization

2.2 Process of deforestation

2.2.1 Reduce earth ability to absorb CO_2

2.3 Technological based agriculture

(2)

DATE: _____

DAY: _____

2.3.1 Agriculture sectors use fertilizers.

2.4 Technological warfare

2.4.1 use of modern cannons

2.5 Poor waste management

2.5.1 poor waste disposal and open burning

(3) Consequences of climate change

3.1 Rise of global temperature

3.1.1 Temperature has risen 1.2°C

3.2 Melting of glaciers

3.2.1: Fast melting rate due to CO_2

3.3 Food insecurity

3.3.1 Reduced crop yield, livestock stress

3.4 Rise of health issues

3.4.1: Heat stress, respiratory diseases

4.5 Displacement and migration

4.5.1 Rising of the extreme

3

DATE: _____

DAY: _____

events and force communities for
migration.

(4) Conclusion
