- 7.3 International cooperation against trafficking and synthetic drug trade
- 7.4 Rehabilitation approaches instead of punishment
- 7.5 Role of NGOs and community based interventions.

8. Conclusion

I summary of main points.

The Essay

In a multi-connected globe through technology and trade, a silent epidemic spreads across borders — the rise of drug usage. Gone are the days when drug usage was confined to rare groups in various parts of the world. Now it has been penetrated to every layer of international society. The pattern of drug addiction, however, varies from first world to third world. In developed world, drug usage often stems from psychological emptiness, ethical lacunas and social alienation. While in developing nations, it is largely driven by unemployment, poverty and weak healthcare. Hence, increasing use of drugs in the modern age has emerged as a global menace. Nevertheless, its consequences and implications for human being are alarming. If this menace is not curtailed with iron hands, it may lead

to disastrous situations across the world. This essay explores factors behind the increasing trend of drug usage, its consequences and implications on human health.
