

Reforestation as a Global Urgency

1- Introduction:

1.1 Hook

1.2 Back ground

1.3 Thesis statement: Reforestation is a global urgency in order to mitigate climate change, global warming, biodiversity loss, natural disasters, soil erosion, air pollution, and restoring extinct plant species and also provides food security.

2- ~~To~~ Mitigate Climate Change:

2.1 Plants as carbon sink

2.2 Stabilizes atmospheric composition

2.3 Prevents changes in climate

3- Prevention of Global Warming:

3.1 Global warming due to deforestation

3.2 Extreme weather in summer

3.3 Regulation of temperature due to plants

4- To Rescue Biodiversity:

4.1 Provision of habitats for biodiversity

4.2 Avoid extinction of endangered species

4.3 Balancing of food chain

Date: ___/___/___

5. Global Safeguard from Natural Disasters:

- 5.1 Temperature regulation
- 5.2 Maintaining sea level
- 5.3 Prevents flooding, cloud bursts, and storms.

6. Avoiding Soil Erosion:

- 6.1 Prevents desertification
- 6.2 Maintaining humidity in soil
- 6.3 Restoring degraded land*

7. Air Pollution Control by Urban Forests:

- 7.1 Imbalanced atmospheric composition in cities
- 7.2 Trees as scavengers of atmosphere
- 7.3 Maintaining fresh atmosphere*

8. Restoration of Extinct Plant Species:

- 8.1 Provides habitat for plant species
- 8.2 Maintains adequate air quality for plants
- 8.3 Maintains appropriate soil condition for plants

9. Mean of Food Security:

- 9.1 Ensures land fertility
- 9.2 Yields fruits and timber
- 9.3 Facilitates soil quality for agriculture purpose

10. Conclusion:
