

✓ 19. One of the peculiarities which distinguish the present age is the multiplication of books. Everyday brings new advertisements of literary undertakings, and we are flattered with repeated promises of growing wise on easier terms than our progenitors.

How much either happiness or knowledge is advanced by this multitude of authors, is not very easy to decide.

He that teaches us anything which we know not before, is undoubtedly to be loved as a benefactor ; and he that supplies life with innocent amusement, will be certainly caressed as a pleasing companion.

But few of those who fill the world with books, have any pretensions to the hope either of pleasing or instructing. They have often no other task than to lay two books before them out of which they compile a third, without any new materials of their own, and with little application of judgement to those which former authors have supplied.

That all compilations are useless, I do not assert. Particles of science are often very widely scattered upon topics very remote from the principal subject, which are often more valuable than formal treatises, and which yet are not known because they are not promised in the title. He that collects those under proper heads is very laudably employed ; for though he exerts no great abilities in the work, he facilitates the progress of others, and, by making that easy of attainment which is already written, may give some mind more vigorous or more adventurous than his own, leisure for new thoughts and original designs.

But the collections poured lately from the press have seldom been made at any great expense of time or inquiry, and therefore only serve to distract choice without supplying any real want.

Preci title;

Date

Multiple publication with sedom Real want

Dilemma of today's literary world is that we are promised new knowledge and entertainment through publishing multiple books. However, most of the writers publish books which are amalgam of already existing knowledge; with nothing new. The author condemn such publications. Moreover, scientific knowledge contains many hidden concepts which need to be addressed separately. People who collect and organize those concepts are genuinely helping others by making scientific knowledge understandable for ~~them~~ future thinkers which would help them to create something new.
