

# Outline and Introductory Paragraph of Essay

## Climate Change: Cause and Consequences

### Outline

1 Introduction

2 Causes of Climate Change

2.1 Green House Gases in Earth Atmosphere

2.1.1 Globally Emission of Green House Gases

2.1.2 Pakistan Contributes to Green House Gases

2.2 Industrial Activities and Climate Change

2.2.1 Industrial Emission from the developed Nations

2.2.2 Industrial Waste in Pakistan

2.3 Rapid Deforestation

2.3.1 Deforestation Across the Globe

2.3.2 Forest Degradation in Pakistan

2.4 Inadequate Investments

2.4.1 Limited Global Financing in Green

~~2.4.2~~ Technology

2.4.2 Low Domestic Spending on Green Technology

## 2.5 Depletion of Ozone Layer

### 2.5.1 Ozone Layer Recovery During COVID-19

## 2.6 Motion of Tectonic Plates

### 2.6.1 Collision of Tectonic Plates

## 3. Effects of Climate Change

### 3.1 Rising Temperature Globally

#### 3.1.1 Report by International Panel on Climate Change

#### ~~3.1.2 Thawing Glaciers~~

#### 3.1.2 Temperature in Jacobabad, Pakistan

### 3.2 Thawing Glaciers

#### 3.2.1 Melting Glaciers in Pakistan

#### 3.2.2 Rising Sea Level

### 3.3 Unusual Rainfalls

#### 3.3.1 Floods in China and Germany

#### 3.3.2 Rain in Pakistan in 2025

### 3.4 Psychological Health on Stacks

#### 3.4.1 WHO report 2023 on Flood victim

#### 3.4.2 Survivor 2022, Pakistan

### 3.5 Disturbing Animals drastically

# 1. Introduction:

Every entity in the world has to experience change. All the things born, develop and then gradually pass away. Some of which has to last long and continue to change their form before ending. Climate is one of those, and is continually changing. According to Astronomers and Geology experts, the world, living and non living things are existing in which, is a result of explosion of giant heavenly bodies due to climatic changes. The present world is also witnessing the climate changes.

Multiple factors take part in climatic changes as rise of green house gases (GHG), industrial revolution, rapid deforestation, weak policy implementation, inadequate investment, depletion of Ozone layer and tectonic plates movements as well. All these

factors are drastically effecting multiple domains of all kingdoms as temperature is globally increasing, glaciers are melting, heatwaves are common, individuals are facing mental health issues, undue rain fall and animals are also effected by climate changes.
