Adopt Formal writing style  
"Education is the most  
powerful weapon which you  
can use to change the world".

notes by Nelson Mandela. In  
Pakistan, educational reforms  
are the source to boost the state.  
China, South Korea and Japan  
are the examples, where education  
changes the history. The concepts  
of literacy and education are  
generally misunderstood. Literacy  
is the general ability to  
read and write. However, education  
is the ability to implement  
bookish knowledge in practical  
field by creativity and skills.

The **delimma** of Pakistan is that  
its youth is not educated  
rather literate. The importance  
of education has been vanished  
from the priority list of state.

Being a muslim state, the  
importance of education is the

general discussed idea in Islam.

The first word revealed on

Prophet PBUH was 'Iqra' (اُقرا),

which means to read. The

difference between educated and

illiterate is mentioned at multiple

time in Holy Book. Moreover,

from global perspective education

is widely discussed phenomenon.

Unfortunately, education has

never been a priority of

Pakistani state. Education has the

potential to address Pakistan's

political and economic insecurities.

So, it is the need of the hour

to make education as first

priority of state. In Pakistan,

vocational training, integration of

technology and budget allocation

are the priorities to adopt while

reforming education system. The

need to address the challenges

of poor infrastructure, expensive

education and lack of entrepreneurship.
