Day: _____

Q1

B) Solution: Let $A = x$ & $B = y$

According to the given conditions:

$$5\% x + 4\% y = \frac{2}{3}(6\% x + 8\% y)$$

$$\frac{5}{100}x + \frac{4}{100}y = \frac{2}{3} \times \frac{6}{100}x + \frac{2}{3} \times \frac{8}{100}y$$

$$\frac{5}{100}x - \frac{2}{3} \times \frac{6}{100}x = \frac{2}{3} \times \frac{8}{100}y - \frac{4}{100}y$$

$$\frac{1}{20}x - \frac{1}{25}x = \frac{4}{75}y - \frac{1}{25}y$$

$$\frac{5x - 4x}{100} = \frac{4y - 3y}{75}$$

$$\frac{x}{100} = \frac{y}{75} \Rightarrow \frac{x}{y} = \frac{100}{75} = \frac{4}{3}$$

Hence $\frac{A}{B} = \frac{4}{3}$ Ans

write the final answer in the form of statement.

x _____ x _____ x

C) Solution: A's share = 5

B's share = 2

C's share = 4

D's share = 3

$$\text{Total} = 5 + 2 + 4 + 3 \Rightarrow 14$$

C's gets 1000 more than D

C's share = D's share

$$\frac{4}{14} \times \text{Total} = \frac{3}{14} \times \text{Total}$$

Date: _____

Day: _____

D) Solution: Let $40\% x = \frac{2}{3} y$

$$x : y = ?$$

$$\frac{40}{100} (x) = \frac{2}{3} y$$

$$\frac{x}{y} = \frac{2}{3} \times \frac{100}{40} = \frac{5}{3}$$

Hence: $\boxed{\frac{x}{y} = \frac{5}{3}}$

x _____ x _____ x

Q 2

B) Optical FiberDefinition:

Optical fiber is a fiber made up of plastic which is used for transmission of data through it. It is used instead of metal wire.

Composition:

The inner-most tube

of the fiber is made up of

Date: _____

Day: _____

transparent glass or plastic which is responsible for transmission of information.

⇒ The outer part after core is called cladding that tries to protect loss of information from the core.

⇒ The outer most layer is called jacket. It is responsible for protecting the fiber from the environment and other factors.

How information transmit through Optical Fiber?

Information transmit through optical fiber on the basis of total internal reflection.

Optical data or light strike against a wall of the

discuss these in a bit more detail.....

Date: _____

Day: _____

fiber and reflect and move.

In this way, data is transmitted from one point to another.

c) Working of a Cell Phone

A cell phone is act as a radio where radio signals are used for communication.

Encoder:

Encoder of a cell phone encodes voice or information into radio signals.

Decoder:

Decoder in the receiver's cell phone decode the radio signals that it has received.

Booster:

It boosts the radio signals which make it possible to the transmission of voice from one place to another place.

D) Note on:

a) RAM and ROM

RAM

→ It is random access memory.

→ It is responsible for temporary program running.

→ It is a temporary memory and used for quick access to a program.

→ It can be changed in a system.

ROM

→ It is called read only memory.

→ It is always active when a system is on.

→ It is a permanent memory and slower than RAM.

→ It is fixed and cannot be changed.

Software

→ This part of computer cannot be touched.

→ It is responsible to run programs in the computer.

Hardware

→ This is a tangible part of computer.

→ It is hard form and work as per the instructions of software.

Computer Bus

Computer bus is the connection of nodes that is responsible for the transmission of information.

Bus of Computer
