Start with hook

The technological war has been started since WWII. Russia and the USA were the main players. At that time, both countries wanted to dominate in the space and in 2025 people ~~became~~ became overly dependent on technology. It is evident from that people are doing online business, ordering food online, transferring money online, making new mass destructive weapons, casting votes online, raising voices against injust within society, using credits in restaurants, and developing artificial intelligence. This essay will highlight the factors that how people have become overly dependent on technology.
