## Introduction

The world is continuously reeling under the threats of unprecedented changes. From Covid-19 to the Gaza war, the only planet that is inhabited by beings seems to have endured a lot of pain and agony. Perhaps if, like all the other planets, the Earth <sup>too</sup> was not inhabited by selfish humans, it would not have <sup>borne</sup> the brunt of the mankind. Perhaps the very man that has invested on the planet ~~is~~ is pulling it at its seams. Humans discovered an atom but ended up killing humanity with the same atom, conquered the skies yet turned them into battlefields; ~~built~~ built machines yet enslaved ourselves to them and, we connected the world yet deepened its division. The world today remains fragmented more than it ever was.

This fragmented nature of the world has endangered many things and processes. Perhaps the chief victim of the division remains globalization. The growing and deepening ~~for~~ polarization has had

Date: \_\_\_/\_\_\_/\_\_\_

Day: **MTWTFSS**

a profound impact on how the world stayed connected. Rise of Nationalism, Failing world order, weakening global institution and the rise of populism — all <sup>these</sup> ~~have~~ has made the chances of globalization bleak. Perhaps Globalization would soon become story of the past for mankind
