

Artificial Intelligence and the Future of Developing Economies: Opportunities and Inequalities

Outline

1. Introduction

Attention Grabber

General Statements

Thesis statement: Developing economies can become developed economies by hampering inequalities and fostering opportunities gifted by Artificial Intelligence.

2. Opportunities of AI

2.1- Advanced Industry; innovative ideas and demands of international market

2.2- Improve agriculture; New techniques, selection of crops by weather detection

2.3- Education sector; easily accessible, advanced level, international standard

2.4- Social sector; maintaining good health, infrastructural ideas, community surveillance

2.5- Intelligence - led policing

3. Inequalities

3.1- Blockage of creativity; over dep-

endurance

3.2- Developers access to users; lack of privacy

3.3- Religious and cultural ambiguity; can not understand complexities

3.4- Unemployment; poverty

3.5- Psychological impacts

4- Hurdles

4.1- Lack of awareness and acceptance

4.2- Religious sentiment; Fatwa on technology

5- Solution

5.1- Teach use of AI; local, industrial and agricultural sector

5.2- Maintain a balance; for advancement not addiction.

6- Conclusion

Artificial intelligence is a gem in the crown of ruling advanced technology. Technology has a long history and can be traced back to the arrival of first human.

It started from simple objects of daily use. Every era of human civilization contributed in advancing technology. The journey from a creation of wheel reached Artificial Intelligence. Here man is a master and his creation is master of ^{all} masters.

However, the dark side is the confusion of man to rule or to be ruled. In present time, the use of artificial technology is present in every field but no doubt restricted to developed world. It contributed huge in economic structures of developed economies. No doubt, artificial intelligence whether in form of chat GPT or deep seek, is an ~~accommodity~~ commodity of developed world. Therefore, developing world like Pakistan must avail this opportunity to give birth to new opportunities in every field of life. There is no harm in checked use of artificial intelligence. Pakistan being a third world country can

___ / ___ / 202

Day: _____

boost her economy by implementing AI services. China her neighbour and all weather friend is becoming global power and AI has significant role in it. Hence, developing economies can become developed economies by hampering inequalities and fostering opportunities gifted by artificial intelligence.
