Essay: "Reforestation as a global urgency"

Introduction

Dilemma of Reforestation and Global Urgency.

- Rapid deforestation and habitat destruction
- Wood and timber mafia
- Rapid Urbanization and over population concerns.
- Turning forests into farmlands.

Possible Global Threats in case of Denied

Reforestation

- Habitat destruction of flora and fauna
- Global warming and climate change
- Looming threats of floods and destructions
- World becoming as a concrete jungle
- Urban structures with more pollution.
- Unbridled overpopulation, what's next?
- Food scarcity
- Emergence of New Diseases and Pandemics
- Economic losses

Effects of Reforestation

- Restoration of habitats of Wildlife
- Climate control and lesser destruction
- Stable waters and lesser casualties
- Environmental stability
- Stable food chains and controlled diseases
- Economic stability
- Serenity in global order.

Conclusion.

Day: _____

Imagine being woken up one day with no forests on earth, then the real picture begins with collapse of fauna, waters oozing out of their boundaries, chaos all over, leading to death and destruction. Forests holds an immense importance to earth that is why it has been asked by Prophet Muhammad SAW "to plant a tree even if it is the Hour". The world is witnessing destructions by deforestation that it has become a global concern to plant trees and regain the green status of it. Rapid destruction of habitats in the name of urbanization due to over population and meeting the needs of it. Therefore, turning the lush green forests into either farmlands or a concrete of jungle, fuelling up the crisis of climate change and global warming, further leading towards food scarcity, pandemics and economic losses. Therefore, it is in the favour of contemporary world to turn towards reforestation not just in order to restore habitats but to limit the scope of destructions globally caused by it, thus getting a prosperous and serene global order. In a nutshell, reforestation has gain a status of global urgency which is immensely needed due to rapid deforestation and its catastrophic after effects. These chaos can be limited to an extent which would lead to an environment able to support life in it with prosperity.

Conclusively, the world is witnessing serious destructions due to loss of green belt of the world. But still there is a ray of hope to regain the stable environment back by reforestation and giving back the earth its natural scenic views. Because the stability of earth lies in the tranquility of nature which is only possible after reforestation.
