Artificial Intelligence the Death of Human Creativity

1- Introduction:

Thesis Statement; Artificial intelligence is replacing human Creativity with its smart features, therefore, the world need a holistic approach to preserve human creativity.

2- Artificial Intelligence

2.1 AI, an advance learning machine

2.2 Generative Artificial Intelligence

3- Aspects of Creativity

3.1 creation of art

3.2 Ability of problem solving

3.2 Invention and discoveries

4- Impacts of AI on human creativity

4.1) Replacement of humans in the creation of art

4.2) Beliance on AI for solution to problems

4.3) Employment of AI for college essay writing

4.4) AI, writing codes and automation of freelaneing

4.5) Emptiness in human soul

5- Way forward for the preservation of human creativity

5.1) Integration of problem solution skills in education

5.2) Emphasizing human made art

5.3) Using AI for collaboration instead of human replacement

6- conclusion

In a German fairytale written by clemen j setz, a fisherman and his wife caught a fish. The stomach of fish had a prince stucked in. He granted all the wishes of fisherman's wife to get out. After wishing a palace, luxury life etc., the greedy women wanted the papacy and then to become god. However, the sea turned black and everything disappeared. She again returned to her

impoverished state. This story reflects the situation of humans (the fisherman's wife) and AI (prince) in the contemporary world.

Humans today heavily rely on AI for doing all the creative work that was supposed to be preserved for human. However, soon, they will find their creativity impaired and lost. This will arise a feeling

DATE: _____

MTWTFSS

DATE: _____

of despair and emptiness. Because, creativity serve a leisure for humans to exercise their curiosity, to urge for innovation and to bring about solutions to problems. It enabled humans to invent art such as music, painting and poetry to convey their thought and feeling in an aesthetic way. However, artificial intelligence is replacing human creativity with its smart features, therefore, human need a holistic approach to human creativity.

Moreover, artificial intelligence (AI) is an innovative and advance learning machine with its Generative AI capabilities.

As an advance learning machine, ~~art~~ AI

is persistently learning and evolving from the data being fed to it. AI is also learning from past experiences and executions of prompt during interactions with humans. This ability and its advance features make it more intelligent than humans. AI is swift in response and is able to process large amount of data in a bit which human cannot catch up. Moreover, AI is being fed with an ocean of knowledge and can generate an informed answers. And, due to its learning abilities it can synthesise and ~~and~~ from a creative response.

Other than the advance learning capabilities of AI, Generative AI can create image, text, solution to

problems. Generative AI can create innovative images and videos for entertainment, businesses and personal use. It can write novel, poetry and music. Such features make Generative AI a very interacting tool for the youth and population in general.

As people use them as a casual tool because it doesnot take ^{time} to generate answers and struggle with generating ^{unique} aesthetic art.

While AI features are fascinating but these are the reflection of human creativity. Humans are capable of producing engaging art and solutions to problems due to their creativity. ~~It~~ at They have undergone great

DATE: _____

M T W T F S

inventions and discoveries
because of creativity that
drives their curious soul.

The imaginative abilities
of humans have enabled
them to produce great
arts. Arts refer to an
engaging way of conveying
one's thoughts and
feeling. This skillset was
antecedent ~~of~~ to human,
which today AI also possess.
For example, the renaissance
period has marked a
great period of art production
which caused the transition
of European values, belief
and thoughts. ~~It~~ i
Moreover humans have produced
great paintings, music,
poetry and novels.
It is the creativity which
drove humans that level.

Besides arts, creativity
is the ability of developing

~~Solutor~~ Solutions to problems. This ability is crucial for the human soul to thrive and survive the challenges of life. For instance, if humans would have not survived if they did not develop an alternative to hunting and gathering to meet the food scarcity. Early humans invented agriculture harnessing which boosted the birth of human race. Moreover, contemporary humans are facing multiple challenges and require a maxceel level of human creativity to deal with the issues. These problems require the human creability to invent and discover new ways for the preservation of humanity.

Inventions and discoveries are the reflection

of complex human creativity. Humans have incurred great civilizations because of invention and discoveries. These features are, to an extent, survival instincts, without which, it would have been hard for humans to adapt to the dynamics of Earth. The simplest of which to include is living in extreme cold and heat. However, the inventive capabilities led the human civilization to develop interactive ways to cope with the challenges. For instance, covid-19 pandemic which cost millions of life was alleviated because of the discovery of its antidote derived human creativity.

However, the human creativity is under

challenge because of the invention of AI. AI has replaced human art, impaired the problem-solution capability. It has made college student for easy way out of essay writing and has caused the replacement of humans in coding and freelancing. The impacts of AI is beyond cognitive and social life of human. It is impeding human abilities of struggle, failure, thrust seeking instincts.

One of the main impacts of AI is the replacement of humans in making art. Generative AI can write music lyrics, poetry and produce animated paintings. The flooding of markets with AI

made arts is causing human made original art irrelevant. Because, it is rarity which derives meaning art. Although AI is pouring ~~up~~ a lot of artistic stuff and is causing the alleviation of that rare essence which provided value to arts.

Other than the making of art, AI is impairing human ability of creating solutions to the problems humans face.

Today, humanity face the problem of climate change, regional wars, terrorism etc. However, all eyes for that were before ~~on~~ on humanity itself, are now looking towards AI.

Instead of claiming responsibility for such problems and doing the best possible, humans

DATE: _____

Shifting all responsibility on human scientists, scholars and politicians count on the abilities of AI. However, unable to unite humanity for the burden upon their shoulders. For example, Paris climate agreement and COP27 mandate remain unfulfilled.

- Besides the impact of AI on problem solving skills of humans, college students are prompting chatgpt to write for them essays. Essay is the essence of human creativity. It enable people to convey ideas in coherent and comprehensive manner. However, the faltering of such an important skill to AI mark the decay of human creativity. According an article in

Guardians, highschool and college student cheat their essay writing to ward off the complex process of conveying ideas. Thus, such an impact leave deep scars on human creativity which impact other areas, too, such as coding and freelancing.

Coding and freelancing were the functions of human. They require human creativity and imaging. coding refers to the writing of binary number for computational programming. where, freelancing refers to human making interactive web interface, graphic designing and data analysis. For instance, according to Meta AI, ~~2024~~ studies indicate 21% decline in free human

digital freelancing due
to AI automation.
AI has made striking
shifts in these areas
particularly, including
other. The transition from
human creativity to AI
based innovation, creativity
and arts will leave
human soul in despair.

AI will make humans
feel empty, as it
is oversteering all the
creative work meant
for human purpose.

Human spirit is curious
one, persistently inquiring
and sorting out to
engage himself in something
creative. Perhaps the
ancestors of humans
might have developed
evolved their creativity
because of boredom. They
might have took a
stick and had drew
something on the mud.

or carved something on the rocks as is evident from early civilization archaics such as Machu Picchu or Inka civilization.

Crivity makes human suffer, strive, fail and succeed.

These things give meaning to human lives. Bertrand

Russell have written about human these characteristics

in his book, the conquest of happiness. He asserts

that human live is born

to be creative. Humans indulge

in curious things which

derive their sense of happiness.

However, when AI take

over all the meaningful

work, it would leave

humans with emptiness

and despair. Therefore, humanity

needs a framework to

preserve their creativity

being antiquated by

AI

In order to preserve human creativity, require the integration of problem solving skills in education systems. To keep the originality of ~~human~~ art, special programs and exhibition ~~is~~ need to be charted. Moreover, instead of ~~outso~~ sidelining AI, it should be collaborated for a more nuanced world.

In addition to preserve human creativity, the integration of problem solving skill should be integrated in school education. kids should be exposed to problems, so that they can learn and go through humanly experiences such as failure, stress and success etc. In this way, the human cognitive

abilities would not only be saved but would also strengthen. According to renowned psychologist Dr. Jordan Peterson, kids should be exposed to some sort of resilience so they can learn to adapt to the difficulties of life and thrive in them.

Other than problem solving skills, art should be emphasised on to enliven human creativity, imagination and ~~invent~~ innovation. This could be done through incentivising art competition on school and college level by awarding awards and monetary benefits. In this way, the human made art would be cherished and the value in it could be preserved.

Contrary to emphasizing human made art, AI will overtake all sorts of art such as music, poetry, painting and ~~with~~ eventually human art will fall in disarray because value ~~de~~ drive motivation. This could even be done through the collaboration of AI for a more nuanced art.

AI should be used in collaboration with human creativity instead of human replacement. It should be integrated to help humans trained to solve complex problems sought to create more engaging activities than overriding humans on all. In this AI could be employed by human for making life more creative rather than

impeding the notion of creativity itself for humans. This will also protect humanly experiences such as stress, pain, success and failure from being from being evaded. Thus, the collaboration human and AI creativity ~~more~~ will make life more engaging and convenient.

In conclusion, AI is an advance machine capable of doing work of human level intelligence. It can do creative things like making art, solving problems etc. Creativity before AI was an ability limited to humans who employed it for ~~the~~ inventive and imaginative things.

However, that is now down-
turned by AI which can
execute creative tasks
much better. This has
impaired the value of
human creativity in
different aspects of life
such as art, coding,
designing etc. In order
to preserve the creative
aspects of human life,
creativity and innovative
tasks must be integrated in life.
Not only to just preserve
this rare quality, but
to make it strength which
is the requirement of
contemporary chaotic
world.
