

02 Allocating Budget to Improve Infrastr

There's a dire need to improve infrastructure by building purpose built campuses, providing modern labs & Research facilities and solving Hygiene issues. Purpose built campuses requires properly equipped lecture halls with E-learning tools, Best acoustics, proper lighting and ensuring a proper ventilation thereby creating an ^{student} environmental friendly environment. Moreover, HEC members must visit the building campuses before affiliating with them, there should be a proper check and balance that the basic construction is completed

03 and they should ensure student safety to prevent incidents like that of **Bahria University** in **2019**, where a student **died** falling from **fourth floor** of a building under construction with no proper fences, thus there's a dire need of proper safety measures especially if the building is under construction. The students must be provided Modern labs and Research facilities for the practical Application of knowledge. For e.g. In **Agha Khan University, Karachi** modern softwares & AI technology is used rather than the same old dummies creating ^{mus} and using 3-D Models for better understanding of the Medical students.

4 The students must be provided proper guidance and tools to carry out the researches and publish them internationally. Lastly, solving hygiene issues is of primary importance, healthy body contains a healthy mind. So, if students weren't healthy, how can they concentrate on their studies. For that universities should ensure provision of hygienic food, outdoor cafeterias should be converted to indoor ones for better sanitation, properly cleaned washrooms should be available to students and Dengue Team should conduct surveys ~~to ensure sanitation~~ ~~by~~ to ensure that there are no breeding places for Dengue/Malaria. By keeping in view the aforementioned solutions, the JIs can be remedied, leading to the betterment of Higher Education in Pakistan.
