⇒ Paragraph on Digital Distraction (Why Aspirants fail?)

The Purpose of internet and specifically social media is not entirely bad but the Primary Purpose of all capitalistic Products is maximization of Profit. In social media's case, Profit is directly Proportional to the amount of time a user spends online so it not surprising that social media is designed to be addictive. This addiction of social media, if goes unchecked, will be biggest hindrance to the aspirants' goals. It will make the days seem small and aspirants will be stuck in a never ending backlog of work. Social media will cause a time management disaster and eventually quash dreams of many aspirants. Social media works on the Principle of attention retention due to which it will keep Pushing unrelated content like memes and funny videos which aspirants will find increasingly difficult to skip and they will ruin the zone of aspirants ^{that is} necessary for learning. An addiction to distraction is the end of your creative Production. Generative Artificial

Intelligence and AI based search engines are helpful in filtering out the unrelated information and producing the needed content which saves time. But on the other side, these tools are used to generate content like essays, assignments and even fully deployable complex codes which ^{might make} ~~makes~~ aspirants rely on its content. It will not only hurt the creativity, cognitive ability and sharpness but can also cause biasness ^{and predictability} in the aspirants' answers. The answers generated by such engines overly rely on open source information which might or might not be true which makes the aspirants' ~~ans~~ work questionable. Thus, relying on social media can work against aspirants' goals.
