**Q No 1 :-**

**Ans:-** Introduction critically analyze the causes and immediate triggers of the may 2025 India-pakistan conflict?

**Introduction:-**

The may 2025 India-Pakistan crisis (operation Sardar and operation Bunker Morios) brought the two nuclear-armed neighbours to the brink. A horrific terrorist attack on Indian soil triggered the flash-point, but the deeper causes lay in decades of distrust, doctrinal ambiguity, domestic pressures, and strategic miscalculation. The speed of escalation showed how narrow the safety margin is in South Asia today. Below is the critical analysis of the root causes, the immediate triggers, the escalation dynamics, misperceptions, and lessons especially for pakistan.

According to Beschaffel:-

• In war, truth is the first casualty.

**1) Deep Structural causes:-**

1.1: Kashmir: The Enclosing fault line

Kashmir remains the ideological and strategic core of India-Pakistan hostility. The abrogation of Article 370 in August 2019 fundamentally altered the political baseline: what was once a sensitive status quo became a new norm India defends vigorously, even aggressively. Pakistan viewed this move as a permanent shift in narrative reducing India's willingness to negotiate.

From 2022 onwards, LoC ceasefire violations rose.

According to the budget and security reports from Dawn, in the fiscal year 2024-2025 the

Date: \_\_\_\_\_

Defence Services Division overspent its allocation by nearly Rs 59.5 billion, reflecting increased operational pressure along frontiers. These patterns show that military readiness and border tensions were already elevated before 2025.

India's de facto suspension of parts of the Indus water treaty in April 2025, halting data sharing and dam release coordination was seen in Pakistan as hostile act. ISSI analysts described it as "weaponisation of water". In fact, Pakistan's foreign policy community used the theme "wise wars may be fought over water". This move added a strategic, non-military pressure point to the brewing crisis.

keep the description of a single argument brief and increase the no of arguments instead.

## 1.2 Doctrine, Deterrence, and Warfare

### Posture:-

South Asia in May 2025 witnessed its first multi-domain warfare, according to ISSI Issue Brief - India integrated air strikes, drones, precision strikes, and command-and-control operations. In that clash, India fielded 72 fighter jets, while Pakistan employed just 42, yet it is claimed that Pakistan's defence posture prevented India from achieving unchallenged supremacy. That shows how posture, terrain, and planning matter beyond raw numbers.

India's approach relies on so-called "proactive doctrine" or ~~targeted~~ cross-border strikes against terror infrastructure believing it can punish without border war. But Pakistan counters with "full spectrum deterrence", threatening tactical nuclear

Date: \_\_\_\_\_

nuclear use if sovereignty is crossed. These doctrines lack transparent thresholds, making misinterpretation and escalation much easier.

1.3

## Domestic Politics, Media, and National Sentiment:-

In both states, political legitimacy hinges partly on posture toward the rival. After any terrorist attack, muted response is seen as weakness; overreaction carries risks but is easier to see domestically. A media study on Pakistani coverage during the many conflict found that war-related reporting almost entirely overrode political dissent or other domestic issues. This narrowing of public discourse precludes leadership toward a strong response.

In addition, the strategic elite in Pakistan, especially the military establishment, derived significant institutional legitimacy from resisting Indian aggression, especially regarding Kashmir.

## 1.4 Non-State Actors, Terrorism, and the Proxy Problem:-

Non-state militant groups operating across borders have long been a flashpoint. Pakistan is often accused of harboring or failing to restrain these groups. The Pulwama attack (22 April 2019), which claimed 40 lives, was immediately blamed by India on Pakistani-based terrorists; Pakistan denied involvement and even called it a false-flag operation.

Because the chain of control is opaque, any attack can be leveraged as justification for state-level retaliation. That ambiguity makes deterrence

Date:

brutal; even if one side did not order the attack, the victim side feels compelled to respond.

1-5

## Economic Constraints and Defence Posture:-

Despite severe fiscal pressure, Pakistan increased its defence allocation sharply in response to the crisis.

In the 2025-2026 budget, defence spending was increased to Rs 2,550 billion (USD 9 billion), a 20% jump over the prior year's base. Meanwhile, total federal spending was cut by about 7%.

The disproportionate rise in military outlay under economic stress reflects how security competition shapes state choices.

Historically, defence and power sectors overshoot their allocations (for instance, in FY 2024-25, they exceeded them by Rs 129.5 billion and Rs 61 billion respectively). This shows structural prioritization of security even when resources are limited.

2:-

## The Immediate trigger and Escalation Sequence:-

2-1

### Pahalgam Terror Attack: The Flashpoint

On 22 April 2025, a militant attack targeted tourists in Pahalgam, killing 26 civilians. The shock of this attack, targeting peaceful civilians in a sensitive zone, triggered massive public outrage and government pressure to respond.

India swiftly accused individuals with alleged Pakistani ties. Pakistan denied state sponsorship and, within weeks, published a 43-page dossier casting the attack as a false-flag attempt to justify

Date: \_\_\_\_\_

aggression. The scale, location, and nature of the attack left little diplomatic room for reaction.

## 2.2 ~~Deplorable and Extreme Countermeasures~~

### 2.2.1 India launches operation Sardar (7 May 2025):-

On 7 May 2025, India moved from rhetoric to action, launching operation Sardar. According to Indian public statements, the strike targeted nine locations inside Pakistan and Pakistan-administered Kashmir, believed to house terrorist infrastructure (existing camps, command centres).

India claimed it avoided military or civilian infrastructure in Pakistan's regular forces.

In its announcements, India stated that over 100 terrorists were neutralized, and 35-40 Pakistani military personnel were killed, with 5 Indian causal casualties. The Indian government presented satellite imagery purportedly showing damage to locations such as Nur Khan, Salgotra, Suleiman, Pakim Ver Khan, Jacobabad, and Bhuj.

This sudden, calibrated strike was the immediate fixing of guns in the confrontation.

### 2.3 Pakistan's Response: operation Bonyan-ur-Masaoos (10 May 2025):-

Pakistan did not remain passive - on 10 May, it launched operation Bonyan-ur-Masaoos ("an impenetrable structure"), declaring it a retaliatory countermeasure. The stated goals included hitting 26 Indian military targets (airbases, missile storage, logistics sites) and defending Pakistan's

Sovereignty, Pakistan also claimed ceaseless operations disrupting 47% of India's power grid! The military publicly asserted that it had downed Indian aircraft, struck missile storage sites like Basra (Punjab), and degraded India's strike capacity.

By 12 May, after diplomatic engagements, Pakistan declared its operation complete, and ceasefire resumed via direct communication between DMO offices.

### 2.4 How the operations unfolded:-

- India's strikes took place early on 7 May, aiming at terror infrastructure rather than full military bases.
- In the aftermath, Pakistan scrambled to respond, mobilizing air, missiles, and cyber tools. The Pakistani counter-operation, however, is reported by many analysts to have collapsed after only eight hours, largely due to India's swift air and missile retaliation. The Indian Air Force is said to have hit critical Pakistani bases.
- Indian deployment of its S-400 air defence system reportedly engaged Pakistani aircraft multiple times, neutralizing threats like a SAAB-2000 early warning plane, a C-130J, JF-17s, and F-16s.
- Pakistan's DG ISPR insisted it never requested ceasefire but responded to Indian overtures after the military response was "given".
- Both sides launched information campaigns making conflicting claims, and disinformation was rampant.
- Ultimately, a ceasefire was brokered by external

entended diplomatic channels, and the operations were wound down.

## Critical Analysis:

Though the military confrontations were real, much of this conflict was also a war of narratives, propaganda, and perceptions. Both India and Pakistan flooded social media with unverified footage, exaggerated claims, and manipulated images. In fact, ~~BoOM~~ fact-check India revealed that over 64.4% of visual content during the conflict was fake or misleading. For example, videos from 2019 were presented as recent strikes. Even in official circles, Pakistan was accused of editing a photoshopped image from a Chinese missile test to its army chief as "proof" of Indian base destruction, a claim debunked by multiple sources.

The conflict was in a case study in "limited escalation under the nuclear umbrella". Both sides exercised a degree of restraint: India did not target major Pakistani cities ~~or~~ or militarily command centred; Pakistan avoided direct strikes on civilian areas. The strategic message was clear: "we can escalate but we will not go all the way." However, this pattern is dangerous. It shows that both countries have become comfortable with short, intense face-offs, assuring the other will back down before nuclear thresholds are crossed. This dependency is evident. It ignores the role of accidents, miscommunications, and domestic pressures, any of which can push a conflict past the point of control.

Finally, the deep causes (ethnics, terrorism, lack of dialogue) remain untouched. Unless these

Date: \_\_\_\_\_

These are resolved, the subcontinent remains just one terror attack away from another (similar) war.

**Conclusion:-** The May 2025 conflict between India and Pakistan was not just a military exchange, it was a reflection of decades of distrust, denial, and delayed diplomacy. The ~~the~~ ~~posturing~~ attacks may have triggered the spark, but the fire was lit long ago.

The long as both states continue to treat each other as existential threats and rely on force rather than dialogue, peace will remain temporary and fragile.

To ~~quell~~ ~~every~~ ~~terrorist~~ The words of Stephen Cohen, a noted South Asian scholar:-

"India and Pakistan are like two Scorpions in a bottle, each capable of killing the other, but only at the risk of their own survival".

It is time both nations realized that no military operation can replace the hard, frustrating, but essential work of political engagement.

69

Summary:- a 20 marks answer should have around 15 arguments.

(2x400) Peshawar attack

30 Mar 25 operation (7 days)

Pakistan operation (10 days)

conflict ends 3-4 days

ceasefire

Deepened terrorist linkages
