# Pakistan's water Crisis and National unity

~~Introduction~~

outline

Introduction

The current dilemma in Pakistan

Pakistan's water resources

Role of National unity

Thesis statement

How water crisis is becoming Existential Threat

1) Climate and Ecological changes

a) Monsoon Season: Almost 70% water comes due

to rain, floods and washed in sea.

b) Summer and winter: Severe droughts, water scarcity and other challenges

Aligned your main heading with subheading

2) ~~Underground water level~~

How is ground water creating existential threat

Convey your ideas in a proper manner

a) Lack of support on Pakistan

b) Shortage of fresh drinking water

3) Poor Governance and water weaponization

a) No dams, reservoirs created in decades

b) Almost 96% water used in agriculture

c) mismanagement in water sharing between Agriculture, Household, and Commercial sectors

d) Indian aggression on shared rivers

# National Unity is the Need of the Time

## 1) Government Responsibility

a) Public awareness and Campaigns

b) Interprovincial unity ; Role of IRSA

c) monsoon weather based water utilization

Point are okay but improve your articulation to make them cogent

## 2) Structural Changes required

a) Updation of outdated canals and river system

b) use of modern technology in Agriculture

c) water harvesting

d) Creation of ~~Sponge~~ Cities like Copenhagen

## 3) Social Responsibility

a) Household water saving

b) water recycling

c) understanding the water Emergency

## How national unity beaten water crisis

1) South Africa ; Day zero Crisis 2017-2018

2) Singapore ; water scarcity and good governance

3) Copenhagen ; How ecological changes turns into opportunity

## Conclusion

Imagine a country where almost 70% water comes only in monsoon and wasted in sea, while people left protesting, complaining, and searching for water resources. Any crisis cannot be beaten unless social, ethnic, and government authorities sit together and find solution of that problem. Pakistan is facing severe water scarcity in summer and winter, in contrast, monsoon is creating devastation in all levels. United Nations recent report on Pakistan water resources <sup>could</sup> ~~should~~ be timely warning for Pakistan, if not addressed these warning could become nightmare reality. Pakistan water resources are rapidly decreasing; underground water is going down, glaciers are depleting very fast, severe droughts in summer, force displacements from affected areas, and urban livelihood immensely disturbed. Water scarcity is becoming reality, from water depressed country to water scarce country. National unity is the need of the time, from individual, social, provincial, and national level, all have to understand this emergency. State have to launch national awareness and implementation campaigns to educate the masses on water utilization, on the other side water

management and Structural Changes are also required in rivers and urban management. This target is unlikely to achieve unless the masses and social circles do not cooperate with policy makers. History Shows that how globally the water scarce countries have overcome these issues; whether it is South Africa, Singapore, or Copenhagen, Denmark which manages the natural disasters and turns them into opportunity. To Summarize this, there is no doubt that Pakistan is worst ever affected by water crisis due to change in environment and own mismanagement of water, but these challenges could be mitigated by adopting modern techniques and learning from successful nations globally, without ignoring the importance of national unity.
