

Test #2

Date 14/9/2025

"Reforestation as a global urgency"

Outline

- 1) Introduction
- 2) Reforestation as a global urgency:
 - 2.1) Increasing temperature.
 - 2.2) Melting glaciers.
 - 2.3) Controlling carbon emission.
 - 2.4) Saving biodiversity
 - 2.5) Having unseasonal rains
 - 2.6) Maintaining ecosystem.
 - ~~2.7) Melting glaciers.~~
- 3) Challenges in the way of promoting reforestation.
 - 3.1) Increasing population.
 - 3.2) Lacking global commitments and actions.
 - 3.3) Having no checks and balance on reforestation process.

4) A way forward.

4.1) Having strict policies.

4.2) Controlling population.

4.3) Implementing global commitments and actions.

5) Conclusion.

People are cutting more trees than ~~planting~~ new trees. In Second world war, when ~~the~~ most of the people lost their lives the world's population reached at lower level. After the Second world war, population has been increasing ~~very~~ rapidly due to which urbanization has been increased and people started cutting forests. Now a days, reforestation has become as a global urgency because of increasing temperature, melting glaciers, controlling carbon dioxide, saving biodiversity, having unseasonal rains, and maintaining ecosystem. However, in ~~pro~~ reforestation process, problems like increasing population, lacking global commitments and actions, and no checks and balances are making hurdles, but these challenges can be solved by strict policies, control population, and implement global commitments and action. This essay will highlight why reforestation is a

global urgency, challenges in reforestation process, and solutions as well.

Furthermore, increasing temperature is the reason behind reforestation. The reason behind this is that, the world's temperature is increasing rapidly. According to the report, the world's temperature would be increased 1.5°C centigrade by the end of this century.

It is evident from Australia when they imposed emergency due to which temperature. The most of the people were on beaches due to the high temperature. Moreover, In Pakistan, a few years ago, in interior the highest temperature was recorded before summer. Additionally, the increasing temperature is creating problems for people, especially for those who works outside. This indicates that reforestation is a global urgency.

In addition to this, melting glaciers are another reason which indicates that reforestation is a global urgency. Due to melting glaciers several problems were created like floods. Recently, in Pakistan, Khyber Pakhtunkhwa (KPK), glaciers were melted due to which people faced severe consequences. Melting glaciers are more horrible for those countries in which they have no proper canals system and dams to

Store water. Therefore, reforestation is a global urgency.

Moreover, carbon emission is also increased. There are several reasons behind this, firstly, factories are the main reason due to which carbon emission has been increased. Secondly, vehicles are the another reason due to which carbon emission is increased. Most importantly, cities like "KARACHI" where the peoples have many vehicles due to lack of public transport which is contributing higher carbon emission in atmosphere. This indicates that reforestation is a global urgency.
