

Climate Change: Causes and Way Forward

Outlines

1) Introduction:

- Hook
- General Statement
- Thesis Statement: The recent climate shifts are ~~a~~ direct consequence of human mismanagement, particularly ~~due~~ to increasing global population, extensive forest clearing, and nuclear incidents, all of which aggravate greenhouse gas emissions. ~~however~~, the world community ~~is~~ ^{has been} endeavoring to counter this crisis through pragmatic measures such as reforestation, denuclearization, and the promotion of organic agriculture.

organization and relevancy is key to

2) Causes of Climate Change

2.1 Population Growth

* Citing data such as Pakistan's recent census comparison

* Reports from The Pakistan Bureau of Statistics (PBS)

2.2 Unregulated Deforestation

* Vast areas of forest lost annually

* Deforestation accounts 10% of global warming

* Substantial percent of area lost

2.3 Escalating Nuclear Incidents:

★ 1 Analysis of past nuclear events, such as Chernobyl disaster

★ 2 Nuclear leakage in Iran

2.4 Geopolitical influences

★ 1 US-China trade tension

★ 2 Withdrawal of the U.S. from the Paris Agreement.

2.5 Intensification of Greenhouse Gas Emissions

3. Solutions to Mitigate Climate Change

3.1 Forestation Initiatives

★ 1 widespread planting of trees

★ 2 Implementation of muryawaki mochi

3.2 A unified Global Policy

★ 1 New declaration or policy similar to steps taken by the American Administration

3.3 Global Disarmament

★ 1 Implications of agreements like the JCPOA

3.4 Increased Use of Ecological fertilizers

4 conclusion
