5. Conclusion

"The nation behaves well if it treats its natural resources as assets which it must turn over to the next generation increased; and not impaired in value" (Roosevelt). As natural resources are like assets ^{asset for every nation} for any country but it is equally important to manage them effectively. Pakistan is bestowed with natural resources but unlike the developed countries these resources have not been properly utilized due to poor management. The reasons behind poor management of resources and governance issues and

corruption. Moreover, infrastructure deficit and technology backwardness also contribute to ineffective management of resources. In addition, lack of skilled workforce and environmental degradation are also responsible factors. Despite these challenges, Pakistan has the potential for growth and improvement. Strategies such as policy and governance reforms, and to regularize infrastructure development are required for proper resources management. However, there is also need for modernizing technology and skills development, and to focus on sustainability and environmental protection. Pakistan's ^{the issue of poor resource management} issue of poor resources management stems from a combination of several factors. Pragmatic approaches are required for better management of resources.
