

Expository – Problem-Solution/Cause-Effect

H-W-

Brainstorm & prepare an outline -

Climate Change : Causes & Consequences

Brainstorming

Renewable Resources, Afforestation & conservation
International Agreements (Climate resilient policies)

Properly follow the structure of outline
Thesis statement atleast in the intro para
Prioritize your points
Give atleast three recommendation
Bring coherence in your outline
Points are okay but work on articulation to present them. I'm a well articulated manner

OUTLINE

1. INTRODUCTION

The waddling penguins, stopped and looked at the cracking glacier.

The little penguin was confused. He has been hearing of relocating recently.

All penguins ran for cover as cracking intensified. The little penguin stood, trying to apprehend what was happening. In a moment, the large mighty glacier fell lifelessly at the feet of little penguins. This all happened due to climate change. The issue was born with industrialization and use of fossil fuels. The actions to mitigate the effects of climate change are yet to be seen. The climate change caused Glaciers melting, rising global temperatures, cloud bursts & flooding, hurricanes & droughts, heat waves, loss of Livestock & disturbance of eco system.

2. CAUSES

2.1 MAN-MADE

a. Deforestation

- b. Industrialization
- c. Fossil fuel Consumption
- d. Greenhouse Gases

2.2 NATURAL CAUSES

- a. VOLCANIC ERUPTIONS

3. CONSEQUENCES OF CLIMATE CHANGE

3.1 ECONOMIC

- a. Loss of Livestock
- b. Cost of disaster management & recovery

3.2 ENVIRONMENTAL

- a. Melting Glaciers
- b. Rising Temperatures
- c. Cloud Bursts & Flooding
- d. Hurricanes & Droughts
- e. Heat Waves
- f. Disturbance of ecosystem

4. RECOMMENDATIONS

- i. Use Renewable Sources of Energy
- ii. Reforestation and conservation

5. CONCLUSION
